air conditioning

FUJITSU

the silence

# Synonym of Silence

Nowadays, silence is as appreciated as it is rare. Our ever more accelerated lifestyles do not provide us with as many moments of calm as we would like. At Fujitsu we guarantee a place of absolute tranquillity, in addition to the air conditioning desired under the very best conditions. Wherever. Welcome to the silence. Welcome to Fujitsu.

## Inverter technology. 100% well-being, 0% noise.

The Fujitsu inverter products only consume the energy they need to reach the selected temperature and keep it constant. The result? The elimination of noise, lower costs, greater comfort and extension of the useful life of the compressor.

**INVERTER**

Unlike conventional systems, the Fujitsu inverter technology adapts the speed of the compressor to the needs of each moment, consuming only the energy required. This allows temperature swings to be reduced drastically and maintains a margin of between  $\pm 0,5^{\circ}\text{C}$ , providing greater room temperature stability and comfort.

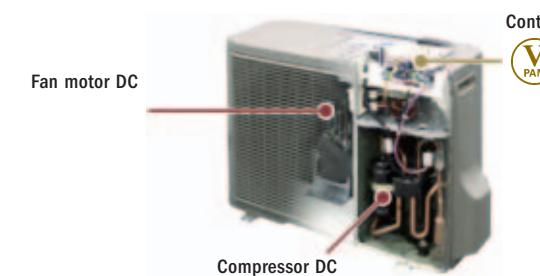

Thanks to an electronic power device that is sensitive to temperature changes , our inverter appliances vary the motor revolutions of the compressor to provide the power required. And when the required temperature is about to be reached, our appliances reduce the power to prevent compressor surges. This reduces noise and allows consumption to be proportional.

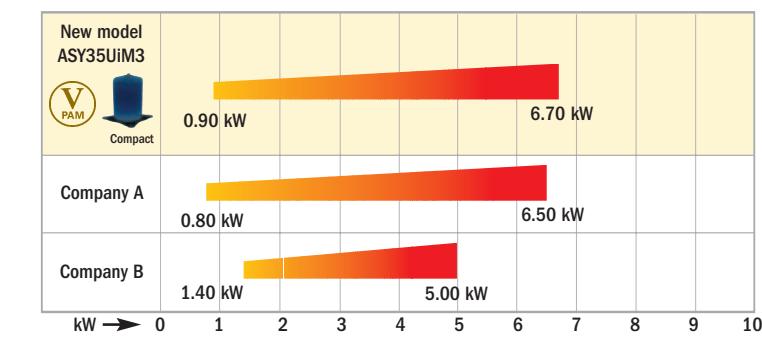

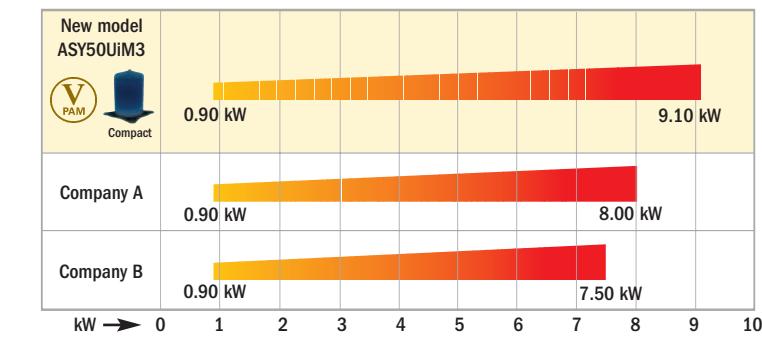

Always on the cutting edge of innovation, at Fujitsu we have developed the DC inverter system with a circuit .

The key lies in our reduced DC compressor which, in addition to providing greater performance, allows the appliance to heat up efficiently even when the outside temperature is very low.

The DC inverter system  allows the compressor to work at 30% above its power, allowing the desired temperature to be reached quicker. It can also operate at up to 15% below its power. Once again, this leads to a significant reduction in both noise and consumption.

Advanced performance (comparison with the heating capacity of the different ranges)  
Japanese manufacturer: Company A, Company B

### Great energy saving

The Fujitsu inverter system allows savings of up to 50% compared to traditional systems.

### More benefits

As well as reaching the chosen temperature more quickly, the Fujitsu inverter system lengthens the life of the apparatus because it avoids continuous switching on and off. It likewise improves the efficiency of the thermal pump, allowing it to work correctly even at temperatures below zero (up to  $-15^{\circ}\text{C}$ ).

## Wall Ceiling Inverter

- With "Power Diffuser" effect for greater comfort.
- Automatic cleaning function.
- Cleaner and healthier air. Two ultraviolet waves in its pasteurised lamp and its ion generator ensure the air is disinfected.

See page 16

## Plasma Clean

- Exclusive plasma filter against dirt and bad smells.
- Generation of negative ions and ozone that disinfect the environment.
- The internal drying operation and UV sterilisation effectively neutralise the impurities in the room.

See page 12

## New items from Fujitsu.

### Duct inverter

- Static pressure adjustment selector.
- Remote control with thermo sensor.
- Outside electrical heater (optional).
- Pump Down function for the return of the refrigerant.

See page 60

### Compact Line Chillers

- Very small units that are easy to install.
- 8 models with a wide range of power (from 4 to 18 kW).
- The mini-chillers adapt perfectly to any residential application.
- They efficiently eliminate losses in the evaporator.

See page 174

## No place like home

Nothing is more important for Fujitsu than people. Faithful to this premise, all of our air-conditioning units are designed to offer complete comfort and tranquillity, providing comfortable settings inside the home.

FUJITSU

# Plasma Clean

Our health depends on clean air. Because of this Fujitsu has come up with Plasma Clean, an air-conditioning appliance fitted with a plasma unit that removes dust and deodorises the air in the room.

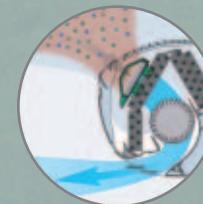

**Plasma Clean guarantees a fresh air at any moment and creates healthier surroundings in the house.**

**INVERTER**

Clean and healthy air in the home

1 The plasma air filter acts directly on dirt and bad smells.

2 The plasma unit generates negative ions and ozone that neutralise bad smells and destroy dust.

3 The Coil dry and the UV sterilisation operation prevent the growth of bacteria and the appearance of bad smells.

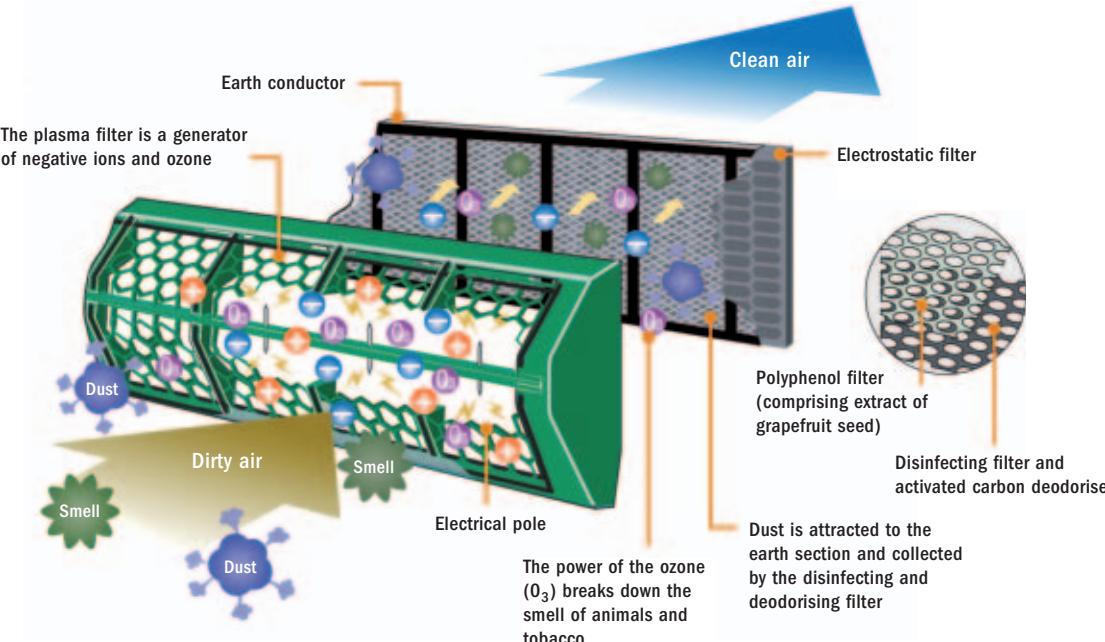

## 1 The plasma air filter efficiently removes particles of dirt and neutralises bad smells

- It removes dirt as well as particles of dust, pet hairs, tobacco smoke, mites, mould or pollen spores.
- It absorbs smells like tobacco, animals, rubbish or body odour. It also kills bacteria, viruses and germs.

## 2 How does the plasma unit work?

The plasma unit cleans and purifies the air in the room thanks to the efficient action of the filters that it incorporates. The electrostatic filter collects the dust particles and is made up of an activated carbon filter that acts as a disinfectant and a purifying filter of polyphenol. The plasma filter generates negative ions and ozone that help improve the environment of a room: They neutralise bad smells and leave it fresh.

## 3 The Coil dry and UV sterilisation operations prevent the appearance of fungus and bad smells

This model incorporates a Coil dry function. When the unit is turned off, the Coil dry function commences for about 30 minutes simply by pressing the Coil dry button. This allows the air-conditioning unit to remain clean and healthy.

### Humidity inside the unit

Fungus and bacteria can grow in conditions of humidity.

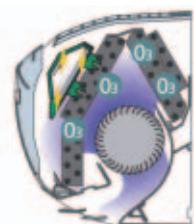

A drying operation that lasts 15 minutes is carried out to remove the humidity.

**Suppression of humidity**  
Coil dry operation.

**Sterilisation**  
Sterilisation operation with ozone.

## Wall ceiling inverter

The Fujitsu wall ceiling model takes another step towards the future of air-conditioning. Its advanced technology allows for innovative advantages: Slats that regulate the direction of the airflow, energy-saving, automatic cleaning of the filters and disinfection of the air.

**The problems of conventional air-conditioning are now behind us... forwards.**  
**THE FEATURES OF WALL CEILING:**

**1** Vertical air outlet for hot air and horizontal air outlet for the air conditioning, thanks to two large slats and the mobile power diffuser. The result: greater performance both with cooling and heating and energy-saving thanks to its flow.

The future of air conditioning today

**2** Automatic cleaning function, removing the annoying task of cleaning the filters.

**3** Cleaner and healthier air. Two ultraviolet waves ensure that the air is disinfected. UV, pasteurisation, deodorisation and cleaning off the inside of the apparatus.

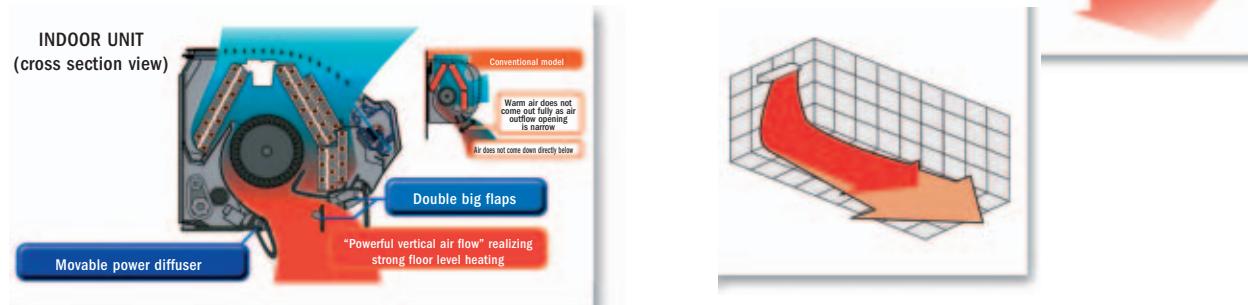

**INVERTER**

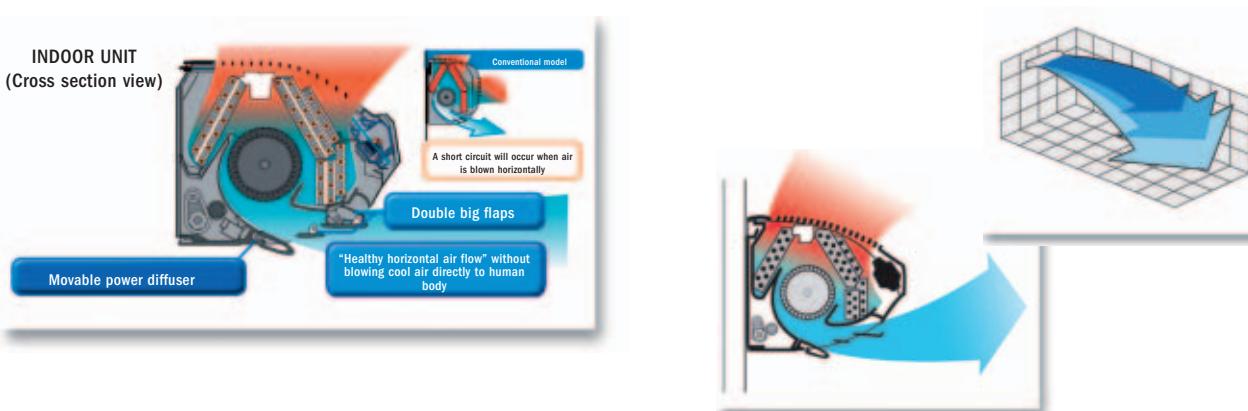

# The most advanced features

## 1 "Power diffuser" effect

Cold air tends to descend and hot air tends to rise. Because of this, air-conditioning in the future must be capable of using these characteristics. Thanks to the action of the slats and the mobile power diffuser, wall ceiling directs a powerful flow of vertical hot air that reaches floor level quickly. This avoids direct air in the face and provides greater heating comfort.

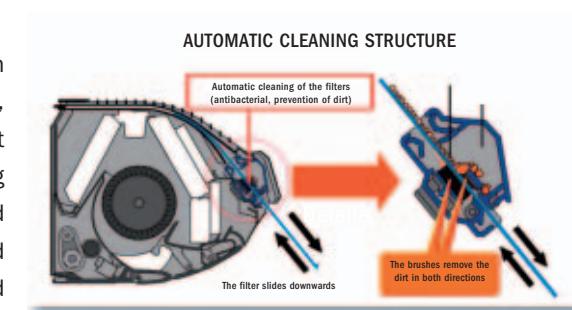

Pleasant and healthy air-conditioning requires the air to be directed upwards. The new large slats, combined with the action of the mobile power diffuser, generate a horizontal flow of outgoing air that prevents direct contact with the human body.

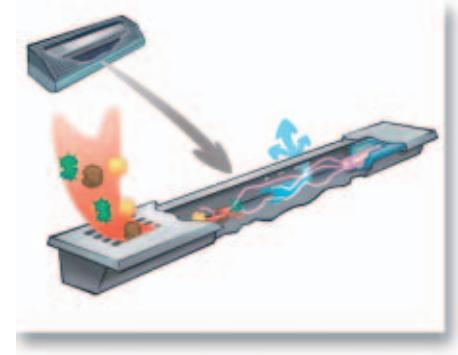

## 2 Effortless cleaning

Wall ceiling is the first appliance in the world with "automatic filter cleaning". When the appliance is not on, the filter slides downwards, the brushes remove the dirt in both directions, thus preventing dirtiness and avoiding the presence of bacteria. Otherwise, dirty filters would cause bad smells, the expulsion of dust and dirt, reduced performance and higher bills. The perfect hot and cold performance provides an annual saving of between 10% and 15%.

## 3 Clean air, healthy air

Wall ceiling also incorporates two ultraviolet waves that ensure powerful disinfection of the air. Through the cleaning generated by these ultraviolet waves, the mould and other bacteria are disinfected inside the "sterilisation lamp". This means only clean air is emitted. When the unit is turned off, the "Coil dry" function starts up inside the apparatus and this is when the low density of ozone, generated by the ultraviolet lamp, deodorises and pasteurises the inside of the air-conditioning unit. These models also include an ion generator that distributes around 40,000/cc of negative ions, providing purer and healthier air.

FUJITSU

## Wall Mounted inverter. Comfort in the home

**INVERTER**

### Complete cleanliness and disinfection

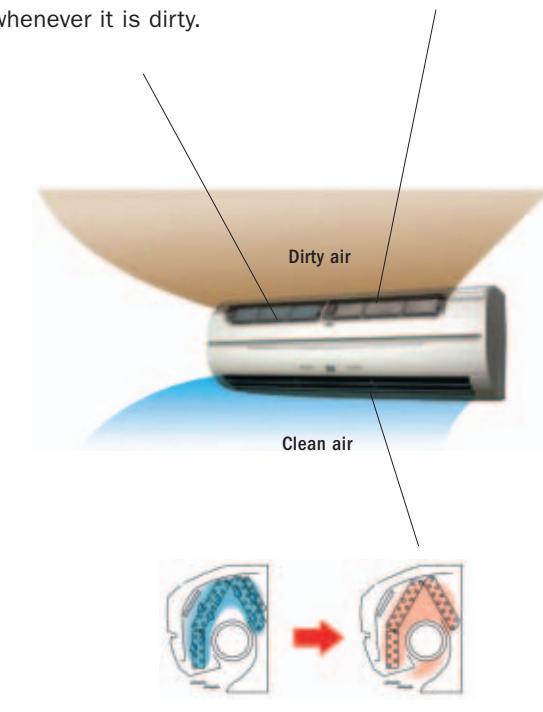

#### Ion deodoriser filter

To achieve a powerful deodorising effect, this filter generates negative ions that absorb bad smells. This filter can be used for approximately three years if it is cleaned with water whenever it is dirty.

#### Antibacterial filter

The static electricity generated by the filter absorbs dust, mould and other harmful micro organisms, preventing them from growing.

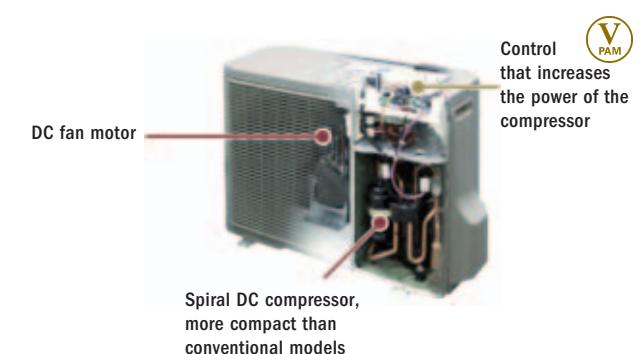

#### Coil dry

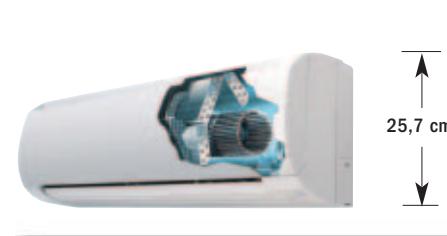

When the unit is off, the internal drying operation is activated to prevent the growth of mould and bacteria inside.

### Class A energy saving

Thanks to its high-performance design, our Class A appliances achieve a powerful flow of air, minimum noise level and exceptional energy saving.

## Wall Mounted. The most advanced features

### Smart designs

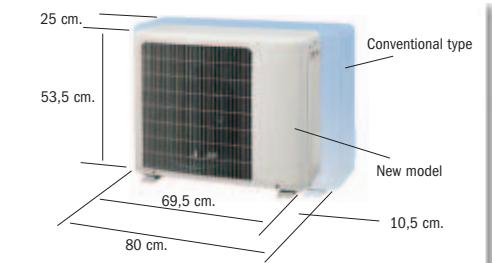

In addition to more attractive aesthetics, the new design of the front of the units provides easier cleaning as the air return remains hidden at the top.

### Lambda evaporator

The strategic layout of the interchanger optimises the dimensions of the inside unit and enhances the flow/K calories ratio. In parallel fashion, the turbine is able to work at lower revolutions and minimises the noise thanks to its greater diameter.

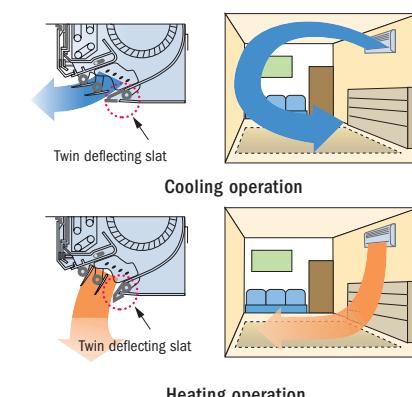

### HSP outdoor units (High Strength Polyester) in the ASY20/25/35UF models

The units made from this material are smaller and weigh less whilst increasing their resistor to the outside. Among the many qualities of HSP is the noise reduction as a result of the absorption of vibrations and the incorporation of unique details, such as the protection of the connection valves.

### Double slat system

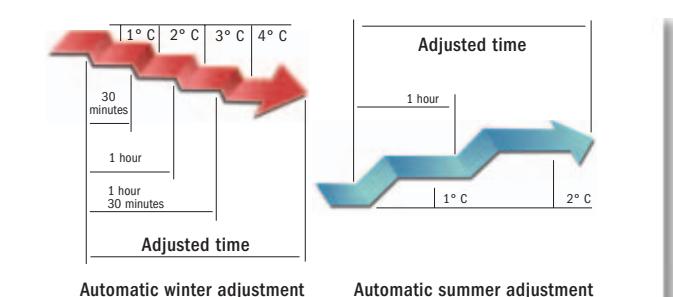

To blend the air in the room with the conditioned air more quickly in order to avoid stratification, the mobility of the two slats gives a longer dart of air.

### Sleep and Nice Morning Timer (NTM)

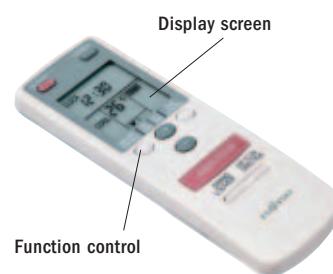

Fujitsu equips its apparatus with these two functions that provide greater comfort.

- SLEEP: This nocturnal disconnection program adjusts the microprocessor to the time of year to condition the room in an optimum manner before the user wakes up.
- NMT: This function calculates the time required for the room to reach the desired temperature at the time set, and turns on the unit when required.

### Five operational modes

Cool, Heat, Fan, Auto (the unit adjusts to the needs of each moment) and Dry (removal of excess humidity).

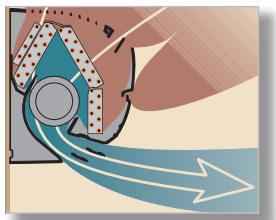

### Remote control with LCD

Ergonomic and easy to use, all the information is displayed on the large screen.

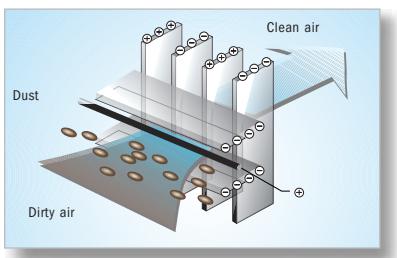

# ASY20-50UiM3

Coil dry.

Optimum flow of 640 m³/h.

Deodorisation through negative ions.

**Coil dry:**

the remote control allows the coil dry function to be easily operated, preventing the formation of bad smells or the build-up of dirt inside the apparatus.

**Maximum performance:**

thanks to its DC inverter operation and "A" energy classification.

**Deodorisation:**

the unit has a deodorising filter that removes dirt and smells via the generation of negative ions.

**Antibacterial:**

the unit also has an antibacterial filter that allows small spores, particles and micro organisms to be removed through the static electricity effect.

# ASY71-80Ui

High technology.

High efficiency and maximum comfort.

## Technology :

the exclusive V-Pam technology of the Fujitsu models, together with the use of the DC scroll compressor allow performance that is far higher than other inverter systems.

## Deodorising and antibacterial filters:

these models include standard long-lasting ion filters that remove bad smells through the generation of negative ions. They also include a polyphenol antibacterial filter (an element extracted from apples) which absorbs dust, spores and other harmful micro organisms.

## Comfortable air conditioning:

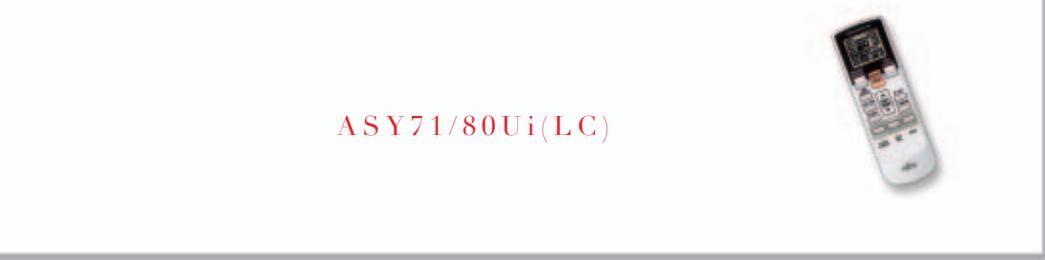

cool air is emitted horizontally, preventing the sensation of direct cool air, while hot air is emitted vertically, creating a sensation of pleasant heat

# ASY25/35UA

Elegance and technology.

**Aesthetics and elegance:**

The interior units are designed for home comfort. The units are fitted with a smooth and compact front panel and ultra-small dimensions of 79 cm.

**Increased performance:**

That leads to maximum energy efficiency for the Class A with an EER of up to 4.07.

**Low sound level:**

Thanks to the Superquiet function that permits the apparatus to work at a lower sound level. It even allows operation at a level of 26 dB(A).

Small, lambda-shaped heat exchanger.

'SLEEP' function. Nocturnal comfort.

**Optimised structure:**

the lambda-shaped heat exchanger optimises space and provides greater evaporation surface, leading to greater operational efficiency.

**"SLEEP" function:**

this adjusts the room temperature to the needs of the human body, raising the programmed room temperature by up to 4°C in winter and by up to 2°C in summer.

**Air flow direction:**

that allows the air direction to be selected using the remote control.

# ASY71-80U

## High efficiency and small size:

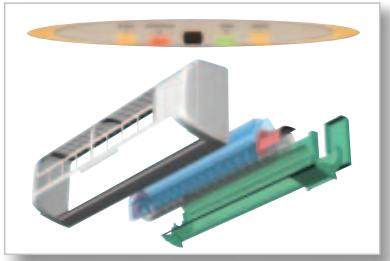

the lambda-shaped evaporator means that the units can be small whilst improving efficiency. The larger air diffuser as well as the bigger turbine size provide a large flow of air with a minimum noise level.

## Sleep function:

which allows the room temperature to be adjusted to the needs of the human body, gradually raising the temperature in summer and lowering it in winter.

## Automatic restart:

in the event of a power cut the unit automatically restarts once the power is back on.

High efficiency and small size.

Tangential air outlet.

Protected valves.

## Super-silent operation:

incorporates auto-restart in the event of a power cut and SuperQuiet velocity for a lower noise level and greater comfort.

## Compact structure:

the outside unit is robust and compact at the same time. It is made from ABS, its valves are protected and it is fitted with a 3-bladed rotary fan.

# ASY71-80F

Uniform air conditioning thanks to the third slat.

Large airflow.

## Uniform air conditioning:

a horizontal or vertical air flow can be created thanks to the mobility of the slats. This prevents stratification and allows the conditioned air to be distributed quicker.

## Aesthetics and trendy design:

for your display its easy to read luminous display.

## Low noise level:

the pieces made from resin reduce the noise level of the unit.

## Coil dry function:

that prevents the formation of smells in the heat exchanger.

**INVERTER**

## Multi Split inverter. Comfort guarantee

**INVERTER**

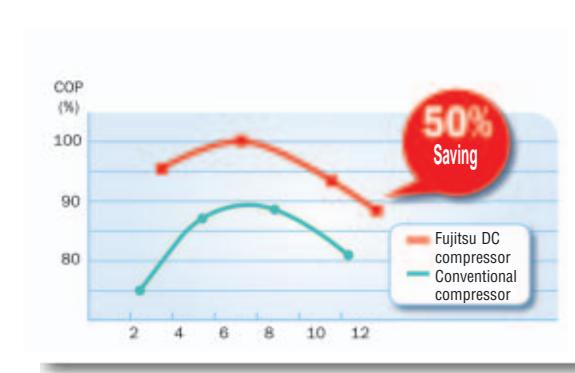

### Multi-inverter DC system

Thanks to the advanced DC compressor, the Fujitsu units are able to reach the room temperature much quicker and maintain it with differences of only 0.5° C.

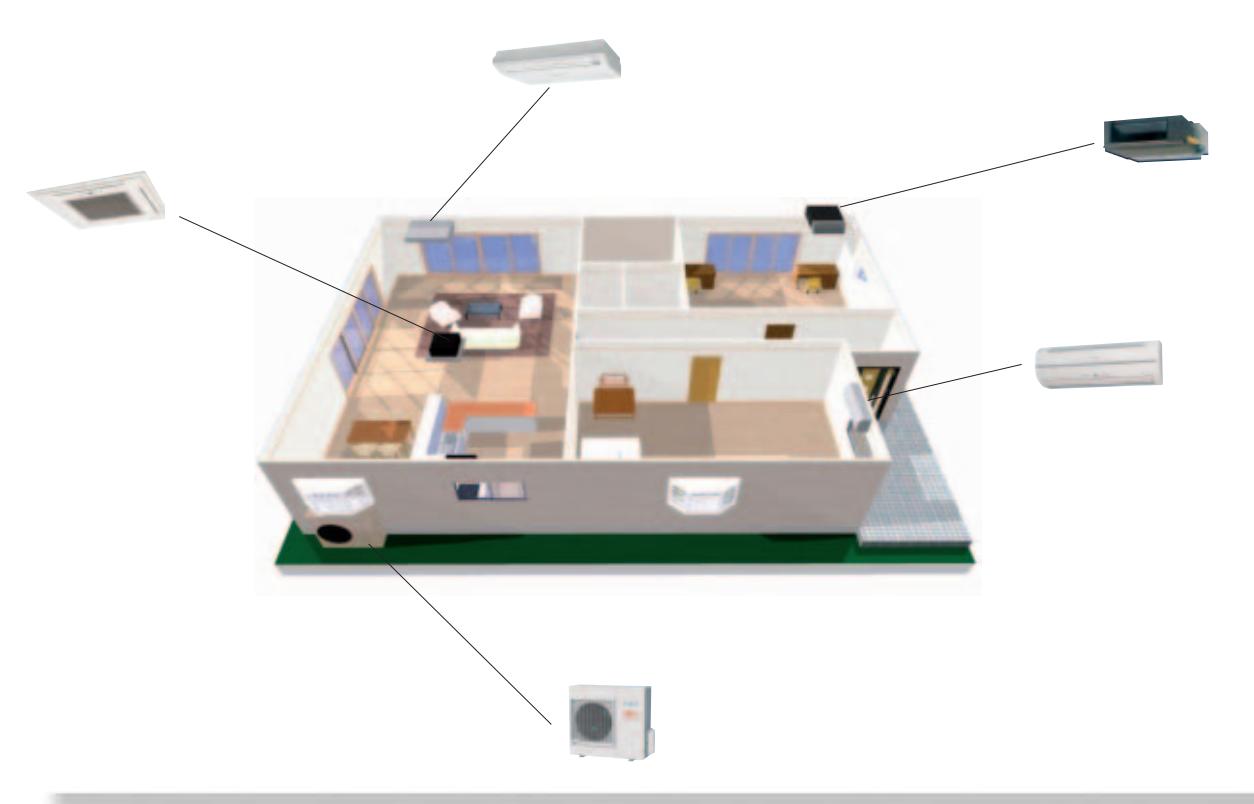

### The perfect balance between power and saving

Compared with the conventional models, the Multi-inverter DC system is up to 50% more efficient and provides a considerable increase in energy saving.

### F series

The Fujitsu units allow different types of evaporators with different capacities to be easily combined (wall, cassette, floor/ceiling and duct type).

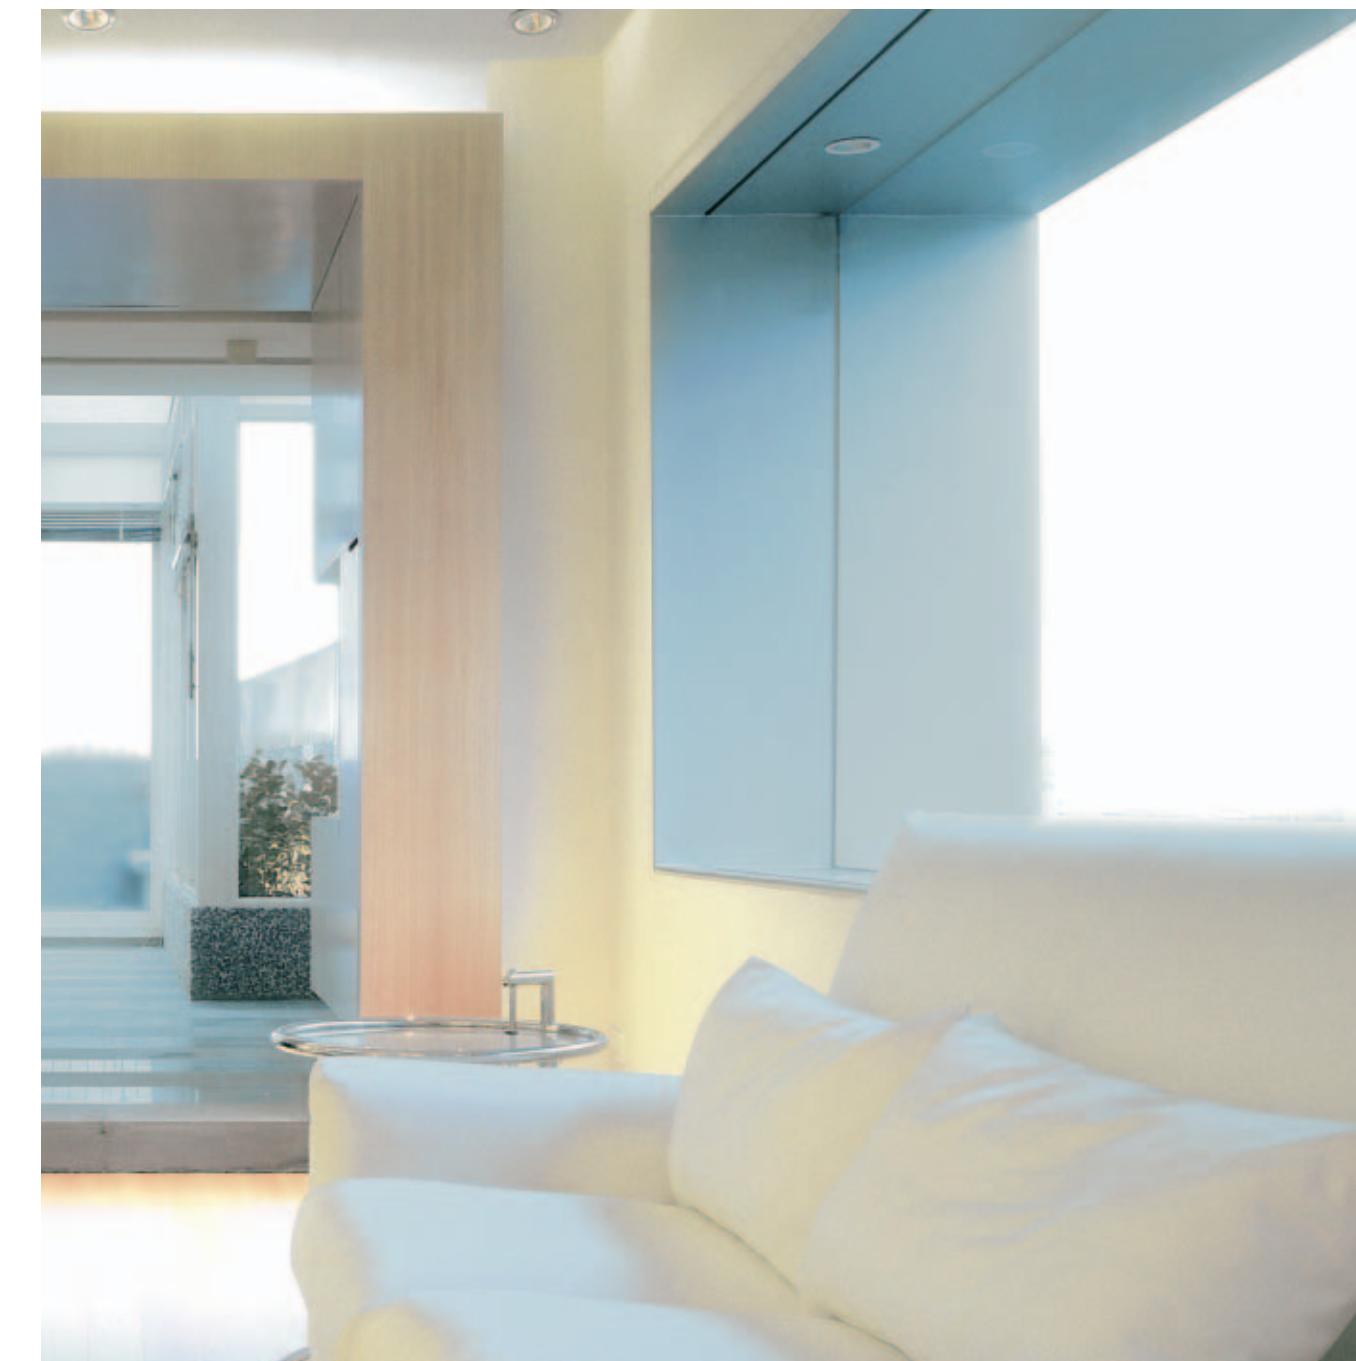

## Multi Split. Everything is an advantage

### Independent compressors

Each compressor of the multisplit 2x1 apparatus works independently with an interior unit. Likewise, all of the multisplit units have two independent compressors built in to form part of a complete cooling circuit.

### The aim of maximum comfort

Equipped with innumerable features to provide the greatest comfort in the home, the multisplit units incorporate Nice morning timer, Sleep, Superquiet (reduces the turbine speed and the noise level) and Air flow direction (regulated using the remote control, up to seven different positions of the air impulsion direction), among others.

# F series

## Maximum flexibility:

thanks to the great variety of combinable indoor units. Up to 16 units with different capacities.

# ASY20-50Ui2

Flexible installation.

Maximum accessibility.

**Flexible installation:**

the units can be installed at 30 metres in total, making the exterior unit very flexible.

**Maximum performance:**

the performance level is very high due to the DC compressor that reaches a COP of up to 4 in thermal pump mode.

**Technical specifications**

# ASY25-71Ti4

Energy saving.

Air fan.

## Energy saving:

the action of the DC inverter system provides efficiency that is superior to a constant velocity system, with the consequent energy saving of up to 50%.

## Multi-airflow function

### (ASY50Ti4-ASY71Ti4):

total comfort thanks to the horizontal and vertical air distribution through the power diffuser.

## Auto swing louver function

### (ASY25Ti4-ASY35Ti4):

which allows the air current to be directed in up to 7 different directions.

ASY25/35Ti4

ASY50/71Ti4

## Technical specifications

INDOOR UNIT		ASY25Ti4	ASY35Ti4	ASY50Ti4	ASY71Ti4

AOY80Ti4

# ASY25U2/352OU11/35U2 M3

## Independent compressors:

the total independence of the compressors allows one unit to be working in cooling mode while the other is working in heating mode.

## Saving and nocturnal comfort:

the sleep function allows the temperature to be programmed to enable it to adapt to the needs of the human body during the night.

## Broad operational range

of up to -10°C in thermal pump mode.

ASY25U2/352OU11/35U2 M3

"Swing louver" and "Air flow direction" function.

## Automatic fan:

total comfort thanks to the vertical and horizontal air distribution that prevents stratification.

## Air flow direction function:

air direction selector with up to 5 different positions.

# APD9A-12A

## 24 hour TIMER Function:

Allows complete programming for the whole day.

## Dehumidification Function:

Keeps a comfortable dampness and temperature level.

## Four fan speeds:

High, Medium, Low and Automatic.

## Auto Function:

According to the room temperature the unit selects its automatic mode for optimum comfort.

## Control:

Remote control with LCD monitor.

# ADD12-20

Great dehumidifying capacity. Reduces dampness in the room and keeps inner air dry and comfortable.

Silent Mode.

Ecological refrigerant to protect the atmosphere and to reduce pollution.

"DRY WASHING" Function. It can be used to avoid dampness on clothes and furnitures during rainy days.

Great capacity in drain tank.

Energy saving.

## Features and design in perfect harmony

Offices, commercial premises, hotels... whatever the desired space Fujitsu places a wide range of air-conditioning units at your disposal. Unifying the most innovative features and the most elegant design, the new commercial range from Fujitsu provides exceptional performance and quality.

## Duct Type. Optimum performance guaranteed

INVERTER

### DC inverter, the smartest technology

Equipped with the DC inverter advanced technology, the new Fujitsu models provide extraordinary performance and ensure large savings in energy with regard to conventional models.

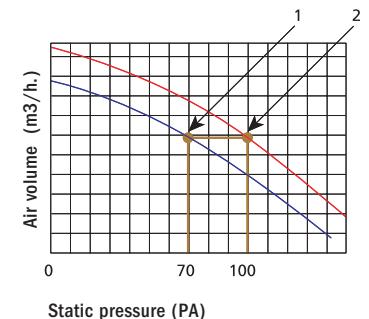

### Everything within arm's reach

These models incorporate a new remote control with thermo sensor, which allows the temperature to be read from the control in an accurate manner. The use of the remote sensor makes it possible to control two areas of the house (day and night) with a single controller.

### Regulation of static pressure

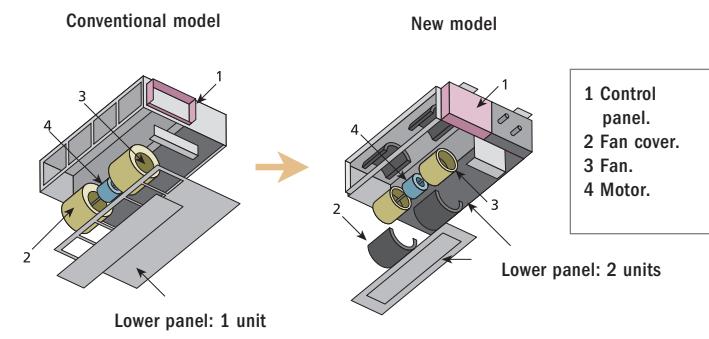

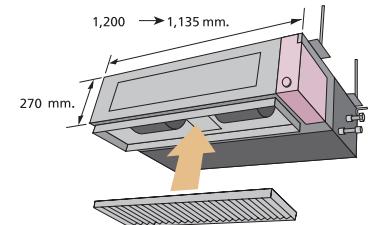

Thanks to its static pressure adjustment function, normal-average or lower static pressure can be chosen during installation, via the selector that is on the electrical panel.

1. Low static pressure level, mode 1 to 70 Pa (fan speed: high).
2. Medium static pressure level, airflow at 100 Pa (fan speed: high).

### Ultra compact units

These low-profile models (21.7 cm in models of up to 5,400 W and 27 cm in models of up to 14,000 W) are also extremely compact as the junction box is built into the side of the unit.

### Outside electrical heater

The electronics board of these units allows external heater to be connected (optional) to operate in heating mode while the defrosting takes place.

### Standard inlet and filters

The Fujitsu ducted models are equipped with standard return filters and a rectangular inlet (except high-pressure models). The circular inlet is optional.

# ACY35-50Ui

Versatility of installation.

Remote control with thermo sensor.

Outside electrical heather (optional).

## Maximum installation versatility:

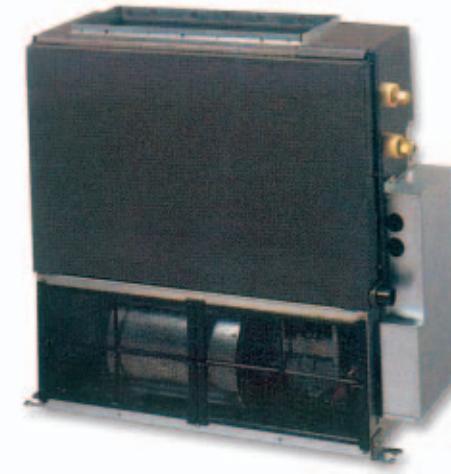

the Fujitsu direct impulsion models can be installed on either the floor or the ceiling.

## Remote control with thermo sensor:

this allows the temperature to be read from the remote control in a more accurate way.

## Outside electrical heater:

the electronics board allows an external heater to be connected (optional) to operate in heating mode while the defrosting takes place.

Remote control with thermo sensor.

Static pressure regulation function.

**Remote control with thermo sensor:**

this allows the temperature to be read from the remote control in a more accurate way.

**Adjustment of static pressure:**

either normal-medium static pressure or low static pressure may be chosen through the adjustment of the selector on the electronics board.

**Outside electrical heater:**

the electronics board allows an external heater to be connected (optional) to operate in heating mode while the defrosting takes place.

## ACY125H-140Ui

Easy installation.

Low sound level.

Remote control with thermo sensor.

**Easy installation:**

thanks to the small size of the interior unit and the use of lighter materials.

**Low noise level:**

the new compact design of the appliances allows the internal air pressure to be uniformly distributed, considerably reducing the noise level.

**Remote control with thermo sensor:**

this allows the temperature to be read from the remote control in a more accurate way. The use of the remote sensor makes it possible to control two areas of the house (day and night) with a single controller.

# ACY25-50U/F

Maximum discretion of floor installation.

Example of ceiling installation.

Outside electrical heater.

## Versatile installation:

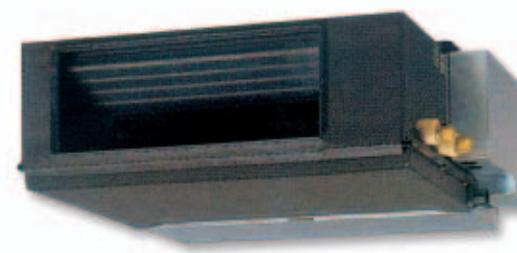

this is ideal for a lounge/dining room or bedrooms and hotels, as it can be discretely installed in ceilings and on floors.

## Energy Save:

they are fitted with the Energy save function that allows the performance of the unit to be optimised and thus provide a considerable energy saving.

## Outside electrical heater:

the electronics board allows an external heater to be connected (optional) to operate in heating mode while the defrosting takes place.

# ACY71-80 U/F

Easy maintenance.

Example of insertion and suspension from the ceiling respectively.

## Control zone function:

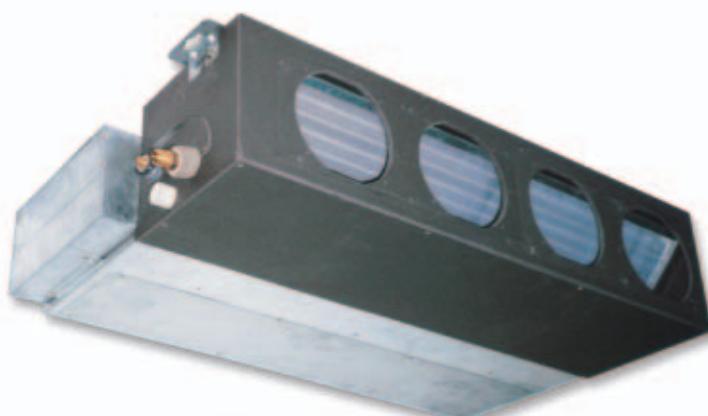

a single controller allows up to 16 units to be connected, requiring a single instruction to operate all of them at the same time.

## Easy maintenance:

access to all components is very simple thanks to the division of the structure into several parts.

## Maximum versatility:

the Fujitsu conduit units have several options that allow easy installation. The air return can be vertical or horizontal and there are two outlets (one on each side) allowing you to choose the best option for installation.

# ACY100-125T/U/UT/FT

Compact design.

Adjustment of static pressure (R410A models).

**Compact design:**

these low-profile models (height 27 cm) are also extremely compact as the junction box is incorporated into the side of the unit.

**Adjustment of static pressure:**

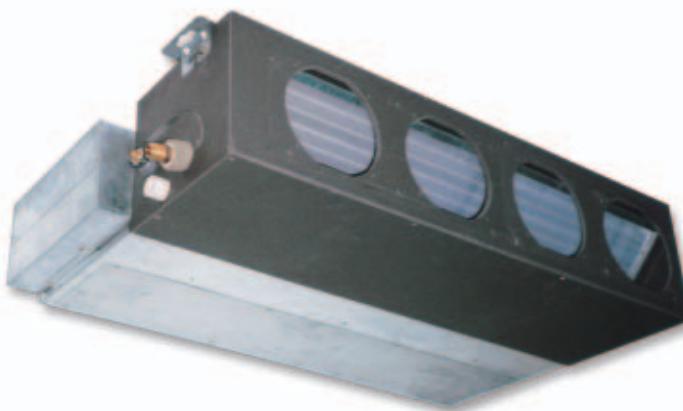

either normal-medium static pressure or low static pressure may be chosen through the adjustment of the selector on the electronics board (R410A models).

**Self diagnostics:**

the remote controller allows you to check the self diagnostics of the apparatus, making any possible error easy to find.

**Ventilation:**

it is possible to incorporate an outside air intake for ventilation as well as a horizontal or vertical return.

# ACY170-250TT/UT/AT/FT

Easy access and maintenance (ACY250).

Low sound level.

## Ease of maintenance:

maintenance of the appliances is very easy as checks can be made at the top, bottom, right or left of the unit (ACY250).

## Accessibility:

the exterior unit can also be positioned in service lifts and access to the compressor is easy via the front cover (ACY250).

## Low sound level:

the new compact design of the appliances allows the internal air pressure to be uniformly distributed, considerably reducing the noise level.

# Cassette. Maximum flexibility

## Efficient distribution of air

In order to be able to adapt to the shape of the room to be conditioned, the Fujitsu cassette units are able to configure the air impulsion in two, three or four different directions and thus achieve uniform air conditioning.

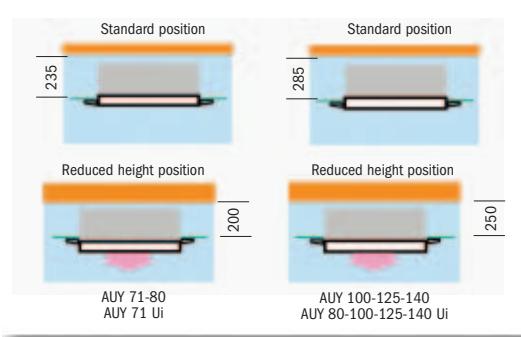

### Water lifter

A series of water lifters are included (up to 800 mm) to discharge the condensation water

## The versatility of the movable rosette

Thanks to the movable rosette, the machines can be adapted to a false ceiling with a lower height. All cassettes over 7,000 W can be installed in a standard position or in an ultra-small position, saving up to 3.5 cm of false ceiling height.

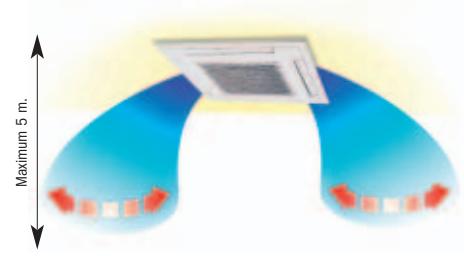

## Controller with thermo sensor

These models incorporate a new remote control with thermo sensor, which allows the temperature to be read from the controller in an accurate manner.

## Air flow direction and auto swing

The unit can make a sweep using its deflector slats to air-condition the premises more quickly. The direction of the sweep as well as the auto swing function can be selected by using the remote control.

## Convenient access and easy maintenance

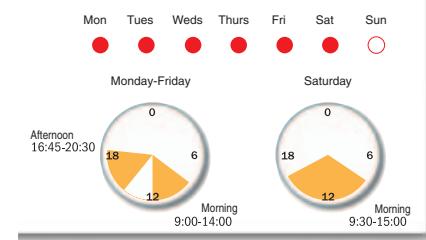

The control panel is easily accessible for maintenance tasks. There are also long-lasting filters which can be easily dismantled for cleaning.

## Weekly programming control

Models with a movable rosette incorporate weekly programming control that allows on and off programming up to twice a day. Functions:

- Programming of different operating schedules each day.
- On and off programming twice a day.
- Set the time in periods of five minutes.
- Cancellation of operation on a specific day (public holiday).

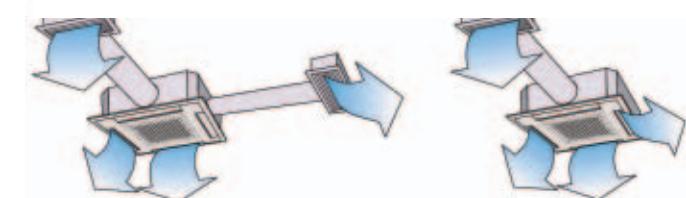

## Automatic closing of the slats

The slats open and close automatically when the unit is turned on and off respectively. This leaves the apparatus with a flat appearance and prevents dust getting inside.

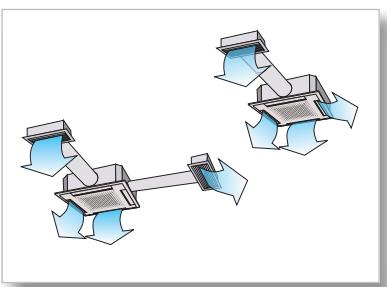

## Condition an adjacent room

An adjacent room can be conditioned using the cassette units by connecting one or two flexible conduits with a length of five metres.

# AUY35-50Ui

Possibility of air redistribution.

Easy access and maintenance.

## Minimum height:

they only require a false ceiling of 25 cm for installation. They are ideal for offices, rooms or shops. The rosette coincides with the standard measurements of the European panel (650x650 mm).

## Condensate pump:

standard pump that allows condensate water to be discharged up to 400 mm.

## Long-lasting filters:

can be dismantled for easier cleaning.

## External air contribution:

outside fresh air can be introduced by connecting a conduit to the unit. This is especially useful in public premises that hold a lot of people.

Remote controller with temperature sensor (thermo sensor).

Reduced height units.

External fresh air contribution.

## Remote control with thermo sensor:

this allows the temperature to be read from the remote control in a more accurate way.

## Condensate pump:

standard pump that allows condensate water to be discharged up to 800 mm.

## Reduced height:

the Fujitsu cassette units with a movable rosette can be installed in a false ceiling with a reduced height of up to 200 mm.

## Energy save function:

this optimises the unit's performance by adjusting the thermostat 1°C every 60 minutes with the entailing energy saving.

# AUY35-50U/F

Air impulsion system with 2, 3 or 4 outlets.

Minimum height.

## Air impulsion system from 2 to 4 channels:

the air-conditioning can be adapted to the shape of the room by channelling the air in 2, 3 or 4 directions.

## Wireless remote control:

an ergonomic remote controller with a large display that allows the different features of the unit to be controlled in a functional mode.

## Condensate pump:

standard pump that allows condensate water to be discharged up to 400 mm.

## Minimum height:

they only require a false ceiling of 25 cm for installation. They are ideal for offices, rooms or shops. The rosette coincides with the standard measurements of the European panel (650x650 mm).

Remote controller with temperature sensor (thermo sensor).

Automatic swing function.

Standard condensate pump (up to 800 mm of water level difference).

## Remote control with thermo sensor:

this allows the temperature to be read from the remote control in a more accurate way.

## Reduced height:

the cassette units with a movable rosette can be installed in a false ceiling with a reduced height of up to 200 mm.

## Comfort air-conditioning:

the automatic swing allows conditioned air to be correctly distributed, providing a uniform temperature throughout the room.

# AUY100-140UT/FT

Weekly programmer.

Reduced height installation.

External fresh air contribution.

## Weekly programmer:

this allows weekly operational programming, as well as pre-setting the turning on and turning off of the unit up to twice a day.

## Controller with thermo sensor:

this allows the temperature to be read from the remote control in a more accurate way.

## Condensate pump:

standard pump that allows condensate water to be discharged (up to 800 mm of water level difference).

## Easy maintenance:

the controller is easily accessible for maintenance tasks and the long-lasting filters can be easily dismantled for cleaning.

## External air contribution:

outside fresh air can be introduced by connecting a conduit to the unit. This is especially useful in public premises that hold a lot of people.

## Wall ceiling. Better quality air

### A design full of benefits

The Fujitsu wall ceiling units offer unbeatable aesthetics as the air return located at the rear is hidden from view once the unit is installed. This leaves these models with a flat front and an elegant rounded shape. This air inlet layout improves comfort by offering a greater airflow and reducing noise.

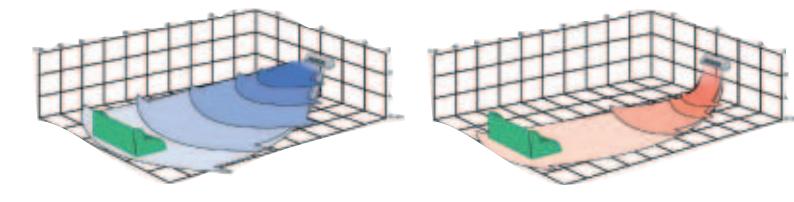

Perfect for every room

### Less friction, more force of air

The upper location of the air inlet reduces air friction.

This considerably increases the force of the airflow and the distance reached (up to 10 m).

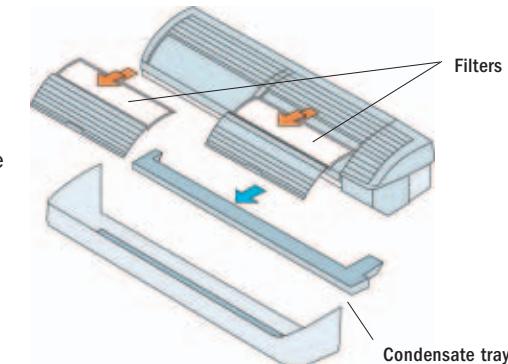

Cool operation

Thermal operation

### Convenient maintenance

The wall ceiling units offer simple extraction of the condensate tray and easy access to the long-lasting filters.

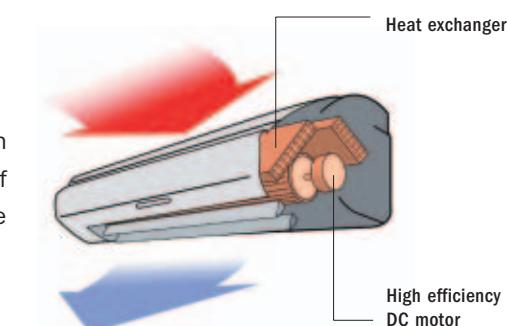

### Simpler installation

The Fujitsu wall ceiling units come with a template similar to the wall models, making installation a lot easier. The outlet tubing also offers greater flexibility as it can be installed on the left or the right.

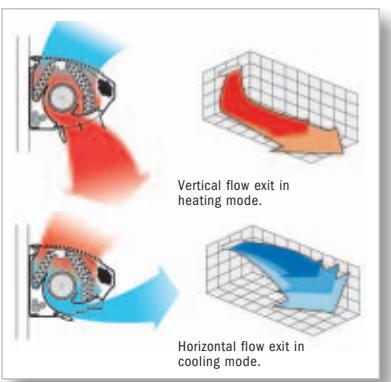

### 100% efficient

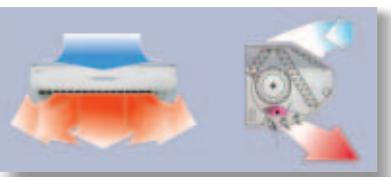

The DC motor of these models offers greater performance which improves its efficiency ratio. Elsewhere, the lambda-shape design of the battery provides a greater air exchange service, achieving the desired temperature in less time.

# AWY71-80Ui

Comfortable air flow.

High efficiency and minimum noise level.

Elegant and exclusive design.

## New flow impulsion system:

vertical in heating pump mode and horizontal in cooling mode, generating a comfortable environment that avoids possible uncomfortable direct currents.

## High efficiency and minimum noise level:

the entry of air through the top allows the noise level to be reduced and increases the air impulsion current (up to 10 m), leading to maximum performance.

## Ease of maintenance:

easy access to the long-lasting filters for cleaning purposes and an extractable and washable condensate tray.

# AWY40-80U

Low noise level.

Operating display indicator

Maximum discretion and elegance.

## High performance and DC motor:

the lambda shape achieves a greater air exchange surface, reaching the desired temperature in less time.

## Low noise level and maximum discretion:

its exclusive and elegant design, featuring hidden grilles and air entry at the top, notably reduces the noise level of the air-conditioning unit. It also has a luminous display showing the operation of the appliance.

## Ease of maintenance:

through the easy extraction of the condensate tray and accessibility to the filter system.

## Automatic vertical and horizontal fan:

the layout of the vertical and horizontal slats, as well as automatic adjustment, allow the air impulsion angle to be modified, preventing stratification and achieving optimum air-conditioning in a short space of time.

## Floor-ceiling units. Free choice

### Installation flexibility

All the units can be positioned either on the floor or the ceiling through the use of an L-shaped cover that allows condensation water to be collected in any position. The fastening system is also designed to fix the unit in both positions.

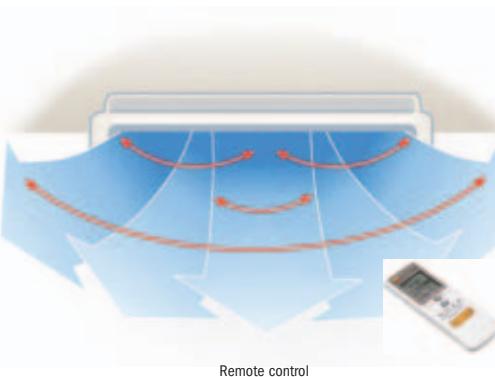

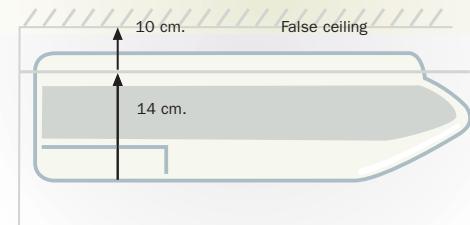

### Selection of air outlet

The remote control allows the air outlet direction and the fan function to be chosen with horizontal or vertical sweeps. Likewise, the double deflector slat system uniformly distributes the airflow avoiding the unpleasant effects that direct airflow can cause.

## Ceiling units. Complete versatility

### Semi-insertable units

Using a false ceiling with a height of 15 cm, the ceiling units can be semi-inserted to allow only 14 cm to be visible. In addition, the profile of the inside unit is designed to fit into a false ceiling made of plaster.

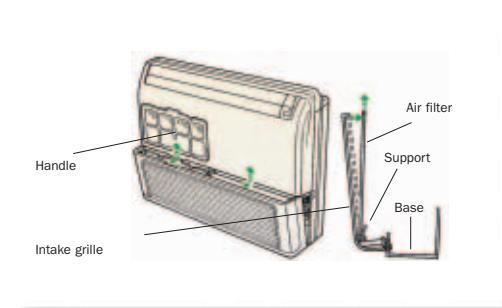

### Full remote control

The functions of the Fujitsu ceiling units are controlled with an ergonomic and easy to use remote control.

- Air Flow Direction: Allows the air outlet direction to be chosen (up/down or left/right).
- Swing: The air is uniformly distributed around the room using a sweep in all directions.

### The filters, always within reach

Because of the easy access their location offers, the filters can be changed without the need for an engineer. And to avoid corrosion through humidity they are made with a polyethylene-based material.

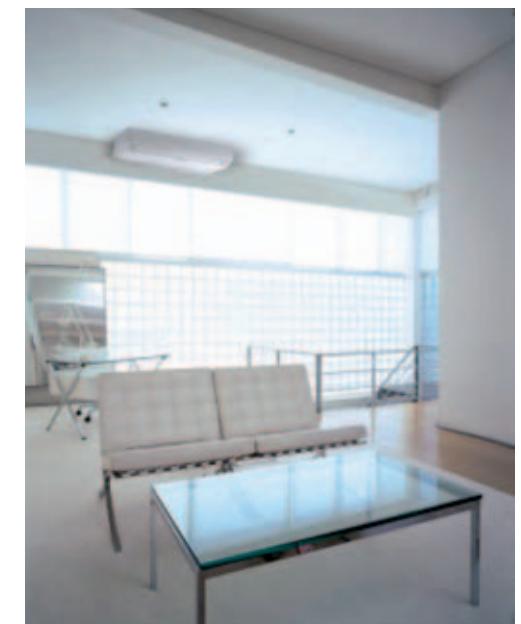

### Easy and convenient installation

There is a template that indicates the distances and the position of the fastening making the interior unit easy to install with the use of just four screws.

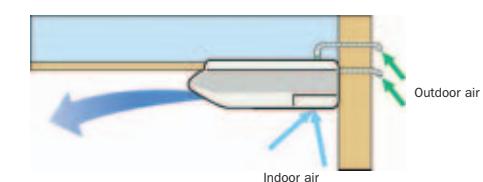

These units are fitted with front and back handles at the same height and on the left and right to facilitate transport and installation.

Installation example

### Air renewal

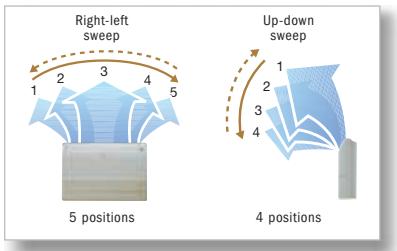

Fresh air from outside can be introduced by connecting a conduit at the top or rear part of the unit. A very useful option in public premises.

# ABY50-71Ui

Compact design.

Twin automatic sweep (auto swing).

**Auto swing function:**

the horizontal and vertical air sweep combination allows three-dimensional control of the air direction.

**Large flow twin slat:**

the hot and cold air is rapidly and uniformly distributed throughout the room thanks to a specially designed twin slat that allows a larger airflow to be generated.

**Universal installation:**

the same unit can be installed on the floor or in the ceiling as the L-shaped cover collects condensate in any position and the fastening system allows it to be attached in both positions.

# ABY40-71U/F

Universal installation.

Smart functions NMT (Nice Morning Timer) and Sleep.

**NMT function:**

the Nice Morning Timer allows the unit to calculate the start time in order that the room is conditioned at the time set by the user.

**Sleep function:**

this adjusts the room temperature to the needs of the human body, raising the programmed room temperature by up to 4°C in winter and by up to 2°C in summer, providing a considerable energy saving.

**Air flow direction:**

this makes it possible to select the flow output direction and contribute to a more rapid and uniform distribution.

Horizontal fan.

Vertical fan.

External fresh air contribution.

**Twin auto swing:**

that allows 5 selections for the vertical or horizontal airflow direction.

**Outside fresh air contribution:**

via a conduit with a diameter of 200 mm connected to the upper or rear part of the machine. Air renewal is very useful in public premises that hold a lot of people.

**Optional drain water lifter:**

an optional accessory that allows a level difference about 30 cm in the false ceiling to be able to generate the necessary slope until it reaches the nearest down pipe (see page 172).

**Semi-insertable units:**

these units are designed to fit into a plaster false ceiling with a minimum height of 15 cm. This means only 14 cm of the machine will be visible.

## Windows

106

### Variable impulsion angle

Equipped with advanced diffusers and the automatic sweep function, the Fujitsu windows increase the airflow outlet opening by up to 140%, with optimum distribution around the room.

### New air

Operating a special device that the Fujitsu windows incorporate allows the entry of outside air, renewing the stale air inside by 10%.

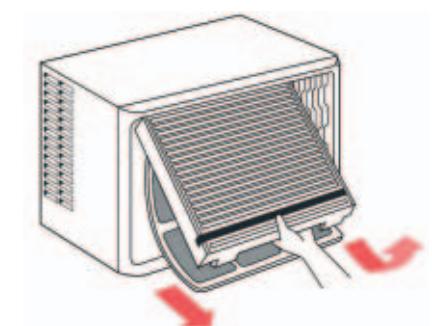

### Reduction of condensate

The high temperature of the windows compressor evaporates the liquids that are generated, at the same time as a ring housed inside the ventilator removes stored water.

107

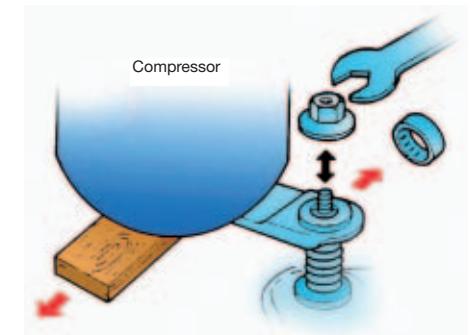

### Easy cleaning of the filter

The filter can be conveniently cleaned without the need to remove the front panel.

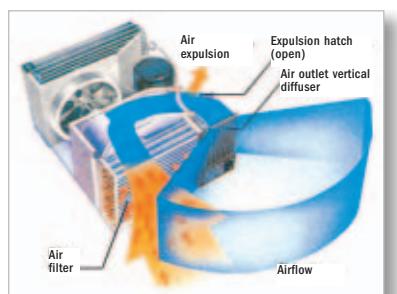

### The well protected compressor

Thanks to a chassis anchoring system the Fujitsu windows protect the compressor from possible vibrations resulting from transport. Likewise, prior to installing the unit is necessary to remove the casing, the screws that hold the compressor into the chassis and finally the wooden protector situated underneath. The compressor must be screwed in place following this operation and the casing replaced.

FUJITSU

# AKY20-35U/F

Variable impulsion angle achieves perfect air distribution.

Easy installation. Extractable casing.

## Perfect distribution of air:

thanks to its variable impulsion angle.

## Easy installation:

thanks to its removable casing.

## Removable filter:

easy to clean.

## Protection of the compressor:

an anchoring system protects the compressor during transportation.

# Remote controls

## Wall Mounted Inverter (ASY25/35/40/50Ui)

### 1 MASTER CONTROL

Performance mode selector:

AUTO: Automatic

COOL: Cooling

DRY: Dehumidification

FAN: Ventilation

HEAT: Heating

### 2 FAN CONTROL

Fan velocity selector:

AUTO

HIGH

MED

LOW

### 3 "START/STOP" button:

On/off button.

### 4 TEST RUN

Test run operation.

### 5 ACL

Carries out a reset.

### 6 Time adjust

Time adjustment.

### 7 "SLEEP" function

Automatic nocturnal disconnection program.

### 8 Thermostat and time adjustments

On/off button.

### 9 Air direction selector

### 10 SWING

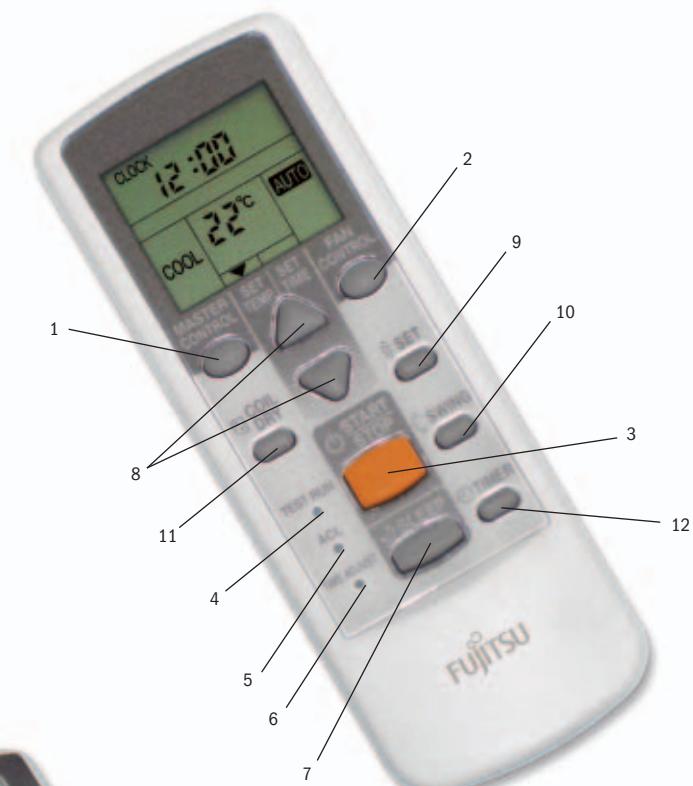

Continuous air fan.

### 11 COIL DRY

Starts the cleaning function.

### 12 TIMER

Enables automatic on and off programming.

## Wall Mounted Inverter (ASY20Ui/ASY71Ui(LC)/80Ui(LC))

### 1 MASTER CONTROL

Performance mode selector:

AUTO: Automatic

COOL: Cooling

DRY: Dehumidification

FAN: Ventilation

HEAT: Heating

### 2 FAN CONTROL

Fan velocity selector:

AUTO

HIGH

MED

LOW

### 3 "START/STOP" button:

On/off button.

### 4 TEST RUN

Test run operation.

### 5 RESET

Carries out a reset.

### 6 CLOCK

Time adjustment.

### 7 "SLEEP" function

Automatic nocturnal disconnection program.

### 8 Thermostat and time adjustments

On/off button.

### 9 Air direction selector

### 10 SWING

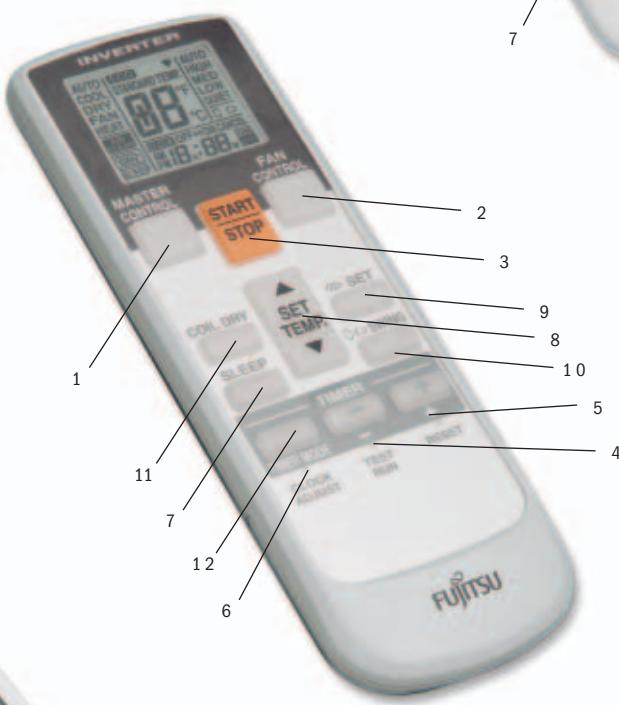

Continuous air fan.

### 11 COIL DRY

Starts the cleaning function.

### 12 TIMER

Enables automatic on and off programming.

## Wall Mounted (ASY20/25/35U/F/ASY25UA/ASY35UA)

### 1 "START/STOP" button

START/STOP button:

### 2 "SLEEP" function

Automatic nocturnal disconnection depending on the time of year.

### 3 COIL DRY

Starts the deodorising cleaning function. (only available with the inverter - UI series units)

### 4 Master control

Function control:

AUTO: Automatic

COOL: Cooling

DRY: Drying

FAN: Ventilation

HEAT: Heating

### AUTO-STANDARD APPROACH at +/- 2 °C

Temperature Environment	Mode Operation	Adjustments Thermostat	
> 30 °C	Cooling	27 °C	
(27 - 30) °C	Cooling	26 °C	
(24 - 27) °C	Dehumidification	24 °C	
(22 - 24) °C	Ventilation	--	
< 22 °C	Heating	23 °C	

### 5 "TEST RUN" button

Test run button.

- This button is used when the air-conditioner is installed and cannot be used in normal conditions.

### 6 TIMER (MODE CONTROL): Adjustments

Used as the timer per connection or per program:

### "OFF": Timer off

"ON": Timer on

"SET": Timer programmed

"CANCEL": Operation motivated by the thermostat

### 7 "ACL" button

Carries out a reset.

### 8 SWING

Continuous air fan.

### 9 SET

Selection of five positions for the air direction.

### 10 FAN CONTROL

Fan control selector: AUTO, LOW, MED, HIGH and SUPER QUIET velocity.

### 11 Thermostat and time adjustments

Room temperature (raising and lowering) and in time selection in accordance with the TIMER.

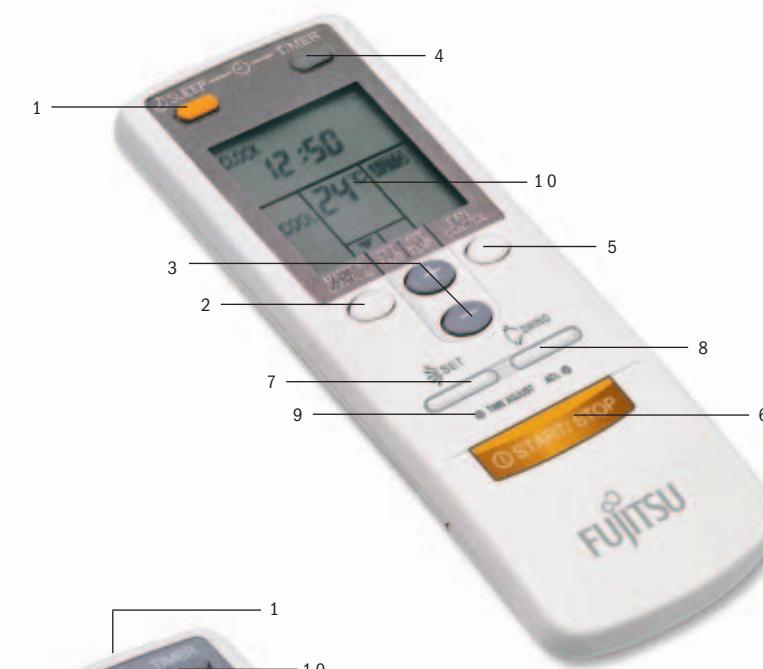

# Remote controls

Multi Split Inverter (ASY20/35/40/50Ui2)

Multi Split Inverter serie "F" (ASY20//25/35UiF-AUY-UiF)  
Cassette (ASY35/40/50U/F/Ui)

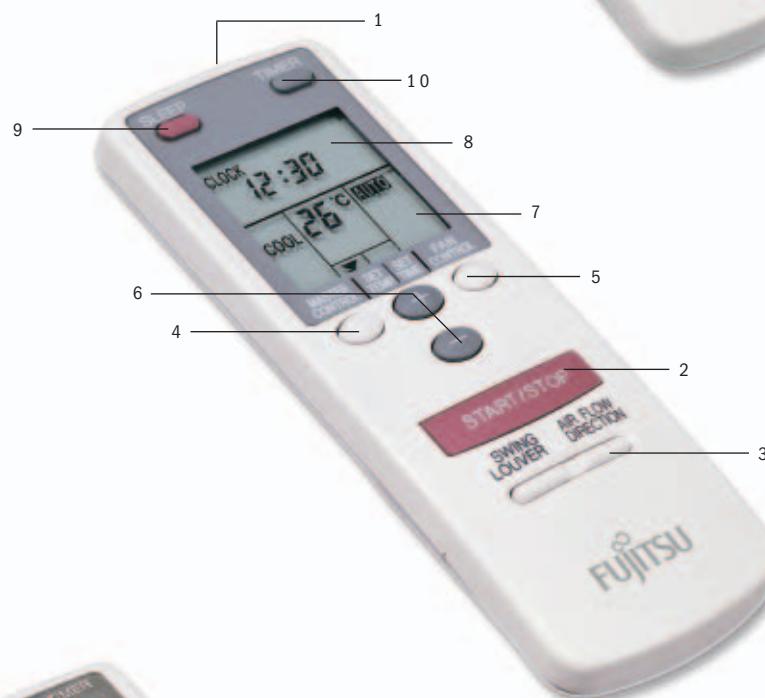

- 1 Sleep Button**  
Disconnection timer function.
- 2 Master Control Button**
- 3 Set temp/set time buttons**  
To adjust the temperature/time.
- 4 Timer button**  
Used as the timer per connection or per program:  
OFF TIMER: timer off.  
ON TIMER: timer on.
- PROGRAM TIMER:** timer programmed.
- 5 FAN CONTROL button**  
To change fan velocity.
- 6 START/STOP button**  
(start/stop)
- 7 Air Flow Button**  
**DIRECTION SET**  
To adjust the air flow direction.
- 8 Air Flow Button**  
**DIRECTION SWING**  
To select the sweep direction.
- 9 Time adjust button**  
To adjust the time.
- 10 Screen**  
Indicates the previous concepts.

Wall Mounted (ASY40/50U/F)

Multi Split Inverter (ASY25/35Ti4)

- 1 Signal transmitter**  
Transmits control signals to the air-conditioning unit.
- 2 START/STOP button:**  
(START/ STOP)
- 3 AIR FLOW DIRECTION**  
Air flow direction:  
3a. - Vertical fan performance  
-SET: 5 positions  
- SWING: continuous  
3b. - Horizontal fan performance  
-SET: 5 positions  
- SWING: continuous
- 4 MASTER CONTROL**  
Function control
- Such as PROCESSES:**  
AUTO: Automatic  
COOL: Cooling  
DRY: Drying  
FAN: Ventilation  
HEAT: Heating
- 5 FAN CONTROL**  
Fan control selector: Velocity in AUTO, LOW, MED, HIGH and SUPER QUIET.
- 6 Thermostat and time adjustments**  
Room temperature (raising and lowering) and in time selection in accordance with the TIMER.
- 7 Display screen**  
Previous concepts.
- 8 Time and timing screen**  
Subsequent concepts.
- 9 "SLEEP" function**  
Automatic nocturnal disconnection depending on the time of year.
- 10 TIMER (MODE CONTROL): Adjustments**  
Used as the timer per connection or per program:  
"OFF TIMER": Timer off  
"ON TIMER": Timer on  
"PROGRAM TIMER": Timer programmed  
"NON STOP": Operation motivated by the thermostat

Wall Mounted (ASY50FB/UB-ASY71/80F/U/Ui)

Multi Split Inverter (ASY50/71/Ti4-ASY50Ui2)

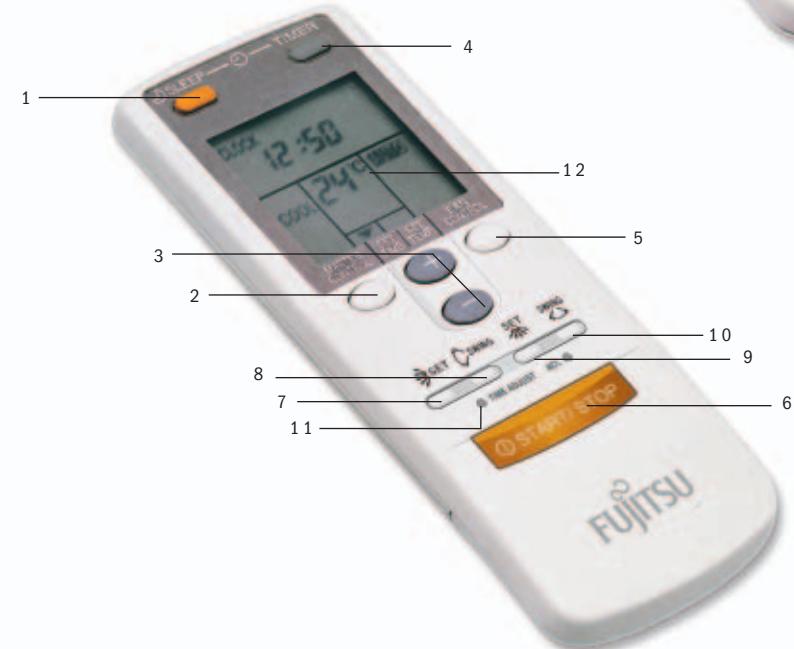

Multi Split Inverter serie "F" (ABY-UiF-ASY50/71UiF)

Floor/Ceiling (ABY-F/U/Ui)

Wall Ceiling (AWY-U)

Wall Ceiling Inverter (AWY71/80Ui)

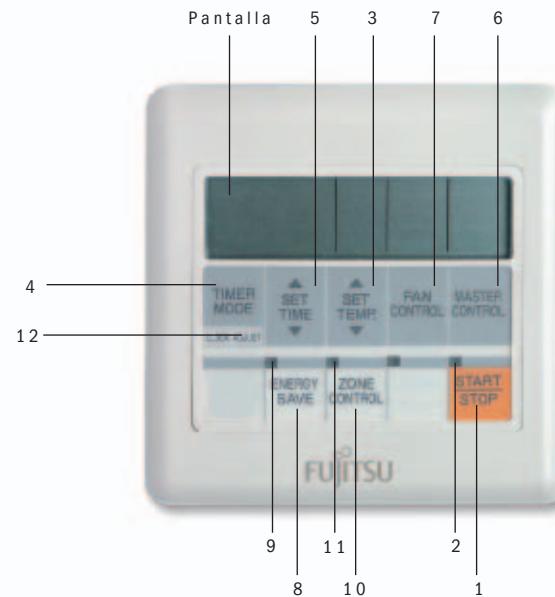

- 1 Sleep Button**  
Disconnection timer function.
- 2 Master Control Button**
- 3 Set temp/set time buttons**  
To adjust the temperature/time.
- 4 Timer button**  
Used as the timer per connection or per program:  
OFF TIMER: timer off.  
ON TIMER: timer on.  
PROGRAM TIMER: timer programmed.
- 5 FAN CONTROL button**  
To change fan velocity.
- 6 START/STOP button**  
(start/stop)
- 7 Air Flow Button**  
**DIRECTION VERTICAL SET**  
To adjust the vertical air flow direction.
- 8 Air Flow Button**  
**DIRECTION VERTICAL SWING**  
To select the vertical sweep direction.
- 9 Air Flow Button**  
**DIRECTION HORIZONTAL SET**  
To adjust the horizontal air flow direction.
- 10 Air Flow Button**  
**DIRECTION HORIZONTAL SWING**  
To adjust the horizontal sweep direction.
- 11 Time adjust button**  
To adjust the time.
- 12 Screen**  
Indicates the previous concepts.

# Remote controls

## Duct Type R407C (ACY100T/170AT/TT)

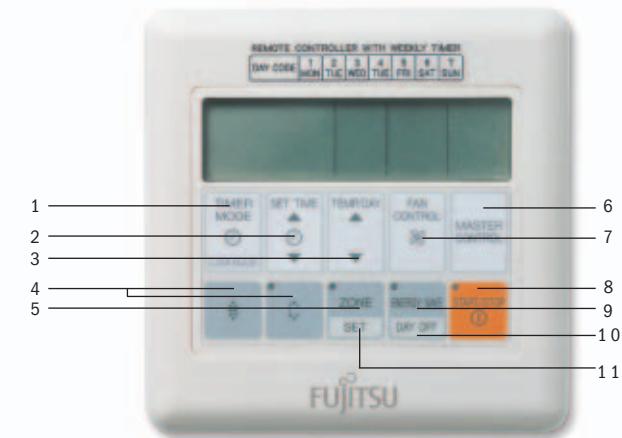

- 1 "START/STOP" button**  
On/off button.
- 2 Operation light**  
Lights up during operation and when the timer is programmed.
- 3 "SET TEMP" button (▲/▼)**  
Used to change the temperature selected (up/down).
- 4 "TIMER MODE" button**  
Used to change the operation mode functions (NON STOP, OFF TIMER, ON TIMER, PROGRAM TIMER, REPEAT TIMER).
- 5 "SET TIME" button (▲/▼)**  
Used to programme the timer (up/down).
- 6 "MASTER CONTROL" button**  
Used to select HEAT/FAN/COOL.
- 7 "FAN CONTROL" button**  
Used to change the fan speed (AUTO, HIGH, MED, LOW).
- 8 "ENERGY SAVE" button**  
Used to save energy between on and off.
- 9 Energy-saving light**  
This lights up during energy-saving operation.
- 10 "ZONE CONTROL" button**  
Used for on/off operation in the control zone, when one controller controls several machines.
- 11 Control zone light**  
This lights up when the unit is in control zone mode.
- 12 Clock adjustment button**

## Cassette R407C (AUY125AT)

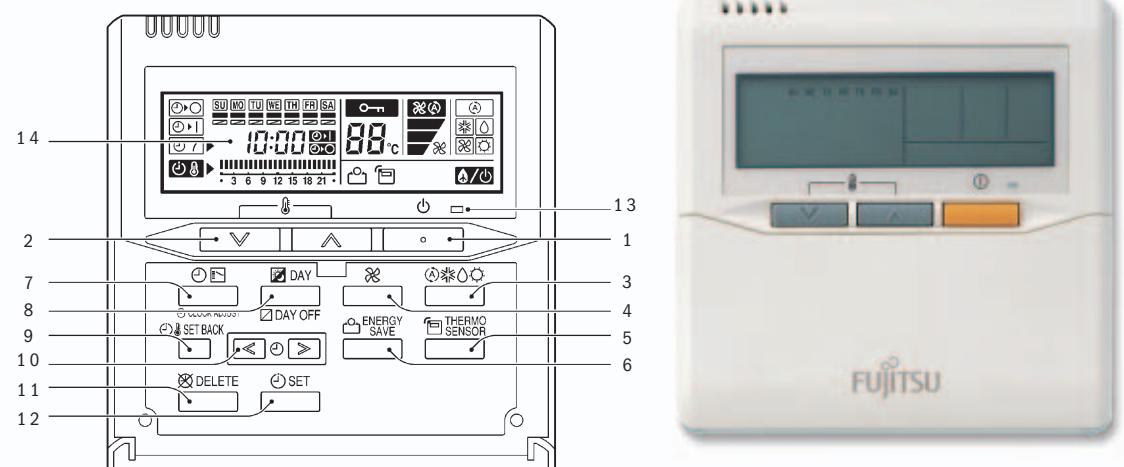

- 1 "TIMER" button**  
Timer mode change.
- 2 "SET TIME" button**  
Programmes the timer and the time.
- 3 "TEMPERATURE/DAY" button**  
Selects the temperature/day.
- 4 Airflow direction / swing**
- 5 "ZONE" button**  
Selects the areas to be conditioned.
- 6 "MASTER CONTROL" button**  
Used to select HEAT/FAN/COOL/AUTO
- 7 Fan speed button**
- 8 "START/STOP" button**
- 9 "ENERGY SAVE" button**  
For energy save mode.
- 10 "DAY OFF" button**  
One day TIMER cancellation.
- 11 Programming button**  
Date, time, minutes, connection/disconnection of the TIMER.
- FUNCTIONS**  
• Possibility of controlling 16 interior units.

- Energy save, zone control function (the zone division is set during installation).
- Has 3 TIMER modes:  
ON/OFF/WEEKLY.
- Weekly TIMER functions:
  - Possibility of setting different start/stop times depending on the day of the week.
  - Possibility of start/stop programming twice a day.
  - Possibility of programming in periods of five minutes.
  - The TIMER program for one day can be cancelled by pressing "DAY/OFF".

## Split Cassette (AUY71/80/100/125/140U/F/U*i*) Duct Type (ACY-U/F/U*i*) Multi Split F series (ACY-U*i*F)

- 1 "START/STOP" button**
- 2 Temperature adjustment button**
- 3 Control function button**  
(Automatic, cooling, fan and/or heating).
- 4 Fan control button**  
(Automatic, medium, low or high ).
- 5 "THERMO SENSOR" button**  
Selects whether the room temperature is detected through the interior unit (remote sensor) all the remote controller.
- 6 "ENERGY SAVE" button**  
Activates the power supply function. During cooling mode the temperature selected will rise approximately 1°C every 60 minutes until the thermostat has risen a total of 2°C. During heating mode the temperature selected will go down approximately 1°C every 30 minutes until the thermostat has gone down a total of 4°C.
- 7 "CLOCK ADJUST" button**  
To select the timer mode:  
Disconnection timer (OFF).  
Connection timer (ON).  
Weekly timer.  
Change of temperature timer.
- 8 "DAY OFF" button**  
Allows the programming for one day to be cancelled (i.e. a public holiday)
- 9 "SET BACK" button**  
To change the temperature.
- 10 Time adjustment button**
- 11 "DELETE" button**  
To delete the adjustments.
- 12 "SET" button**  
To make adjustments.
- 13 Operating light**
- 14 Screen**  
Timer and clock indicator.  
Performance mode indicator  
Fan velocity selector.  
Button operation blocked indicator.  
Temperature indicator.  
Function indicator.  
Defrosting indicator.  
Heat sensor indicator.  
Power Supply indicator.
- CHILD LOCK**  
A function that allows the control buttons to be blocked, for example when they are within the reach of children.

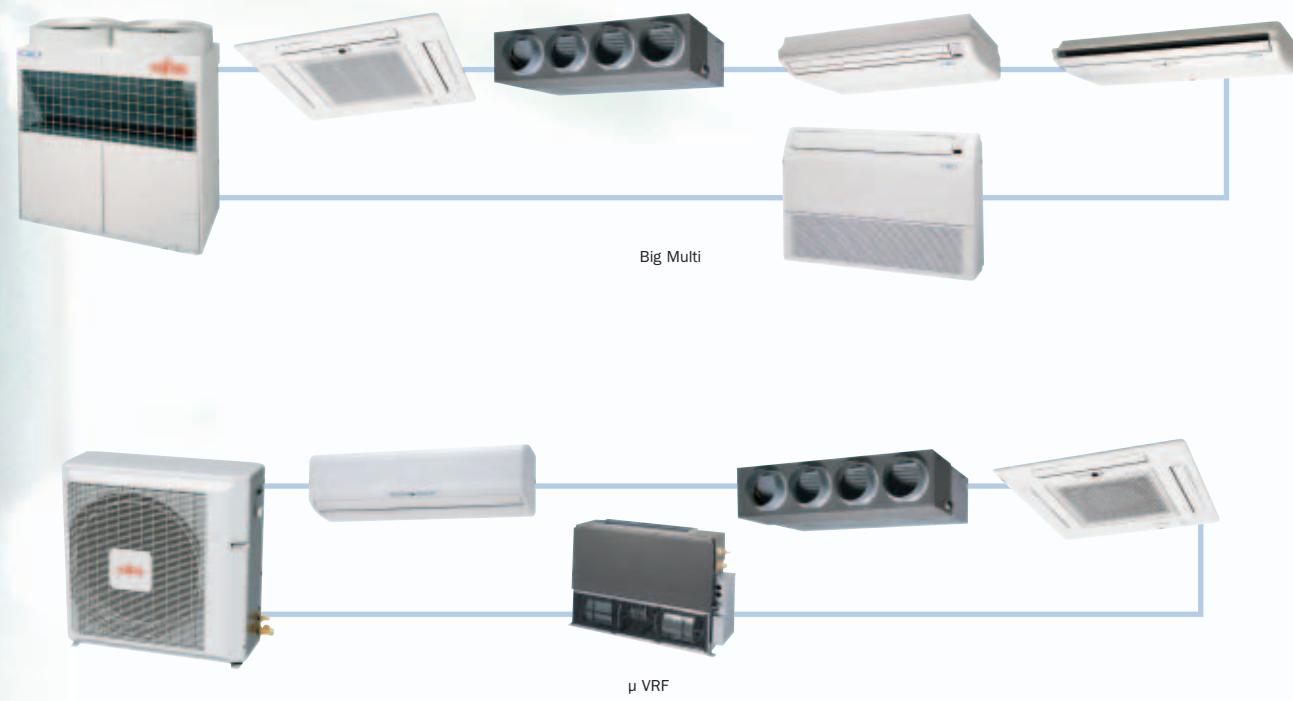

118

## All the quality in any setting

Better quality air, ease of maintenance, reduction in energy consumption to a minimum, etc. The Fujitsu semi-industrial range not only covers conditioning needs in an optimum manner in any place and situation, but also offers incredible performance thanks to its multiple and varied features.

The Fujitsu logo, featuring the word "FUJITSU" in red capital letters with a stylized "J" and a red infinity symbol above the "I".

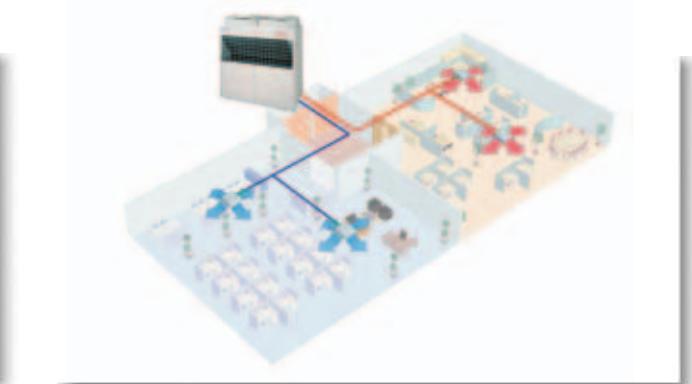

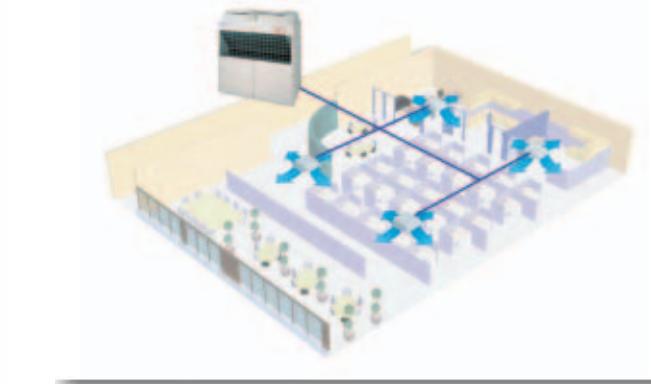

119

## Big Multi. A world of possibilities

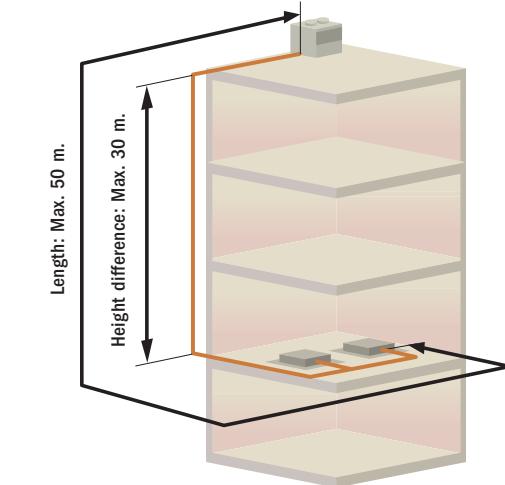

### Freedom of installation

The Fujitsu Big multi units allow 2 x 1, 3 x 1 and 4 x 1 installations both for cooling as well as the heat pump. In cooling only, the indoor units function simultaneously, while in the case of the heat pump there are two circuits that work independently. These can even be used with one working in heating mode and the other in cooling mode.

### High cooling distances

The cooling distance between the outdoor unit and the indoor unit furthest away can reach 50 m., 30 of these in vertical.

### Small size

The indoor units are so small and compact that in addition to being able to be used in a lift, they allow a lot of space to be saved if they are installed in a row.

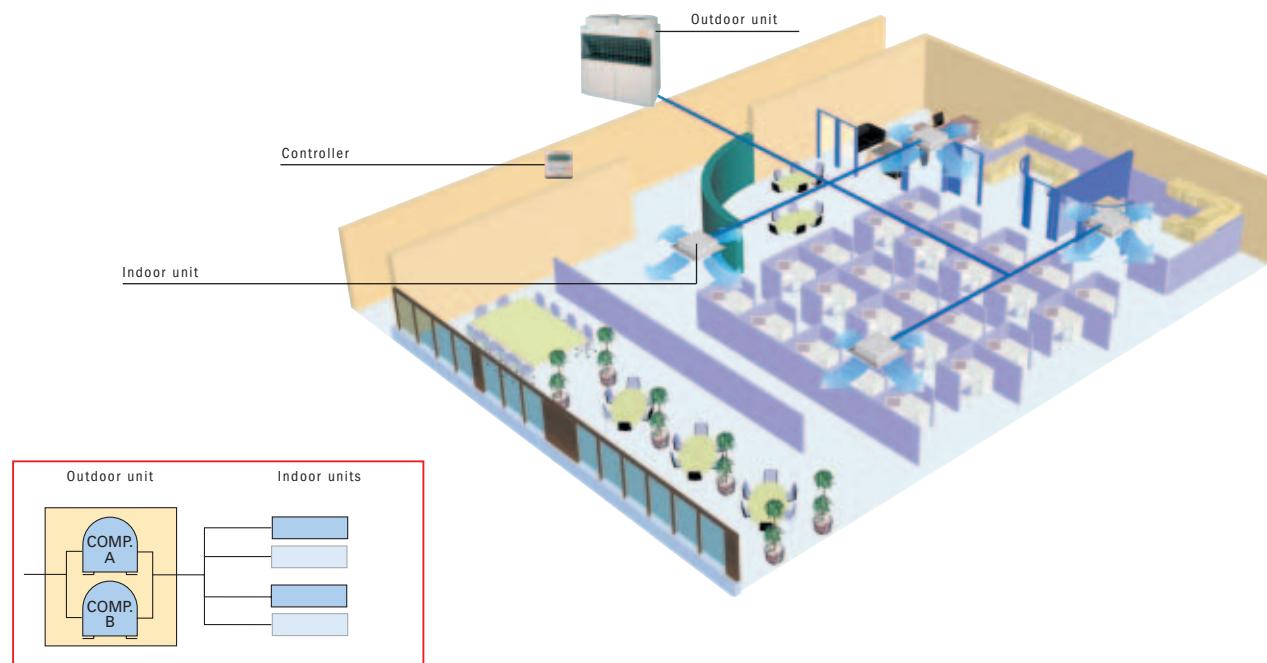

### Weekly timer

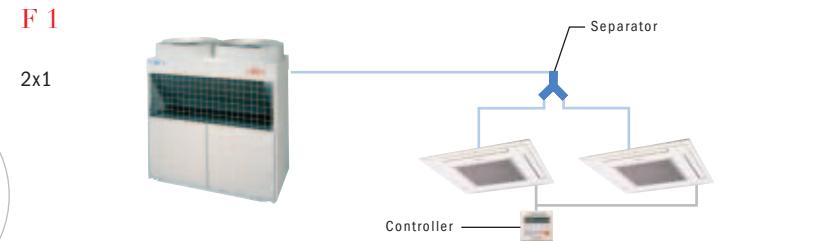

The Big multi units are fitted with a remote controller which allows the on/off options to be programmed up to twice a day.

## Cooling only

- Outdoor unit with two parallel compressors
- All the units work simultaneously
- One circuit: One controller
- Range of cooling operation: 0 to 52 °C
- Up to 50 m cooling distance

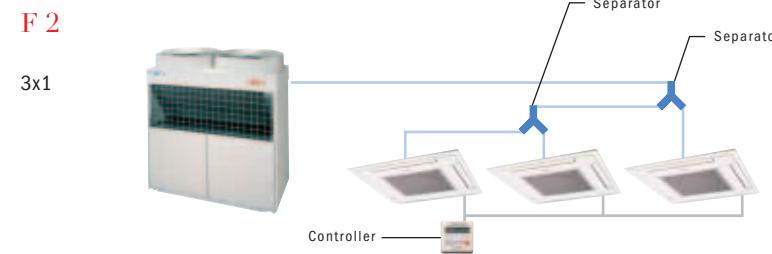

F 1

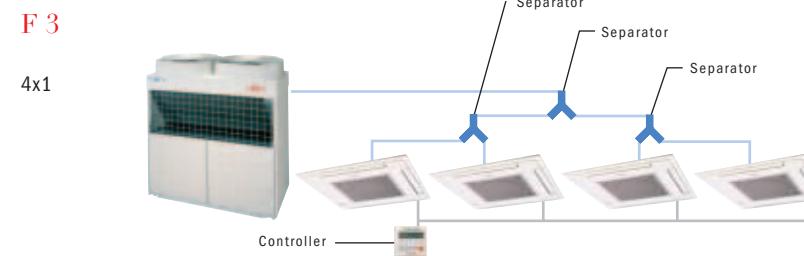

Capacity of indoor units:  
125 + 125

F 2

Capacity of indoor units:  
71 + 71 + 125  
80 + 80 + 80  
50 + 80 + 125  
50 + 100 + 100  
71 + 80 + 100

F 3

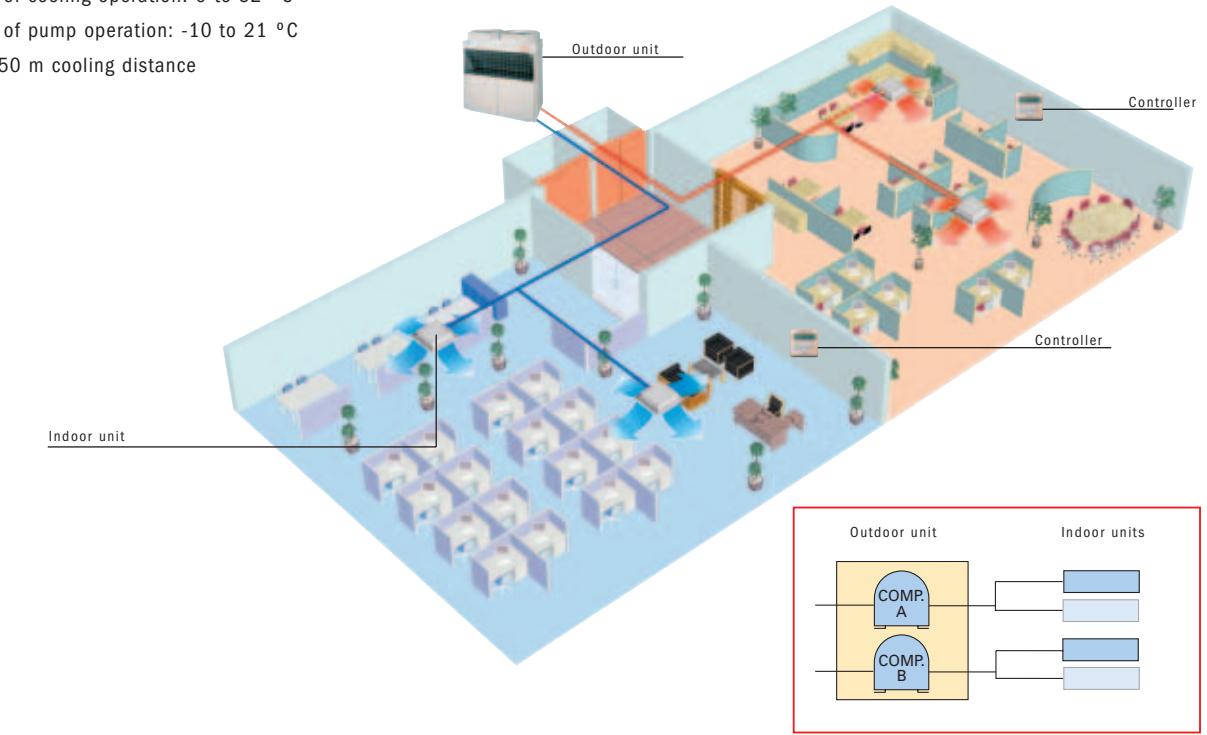

Capacity of indoor units:  
71 + 71 + 71 + 71  
50 + 50 + 50 + 100  
50 + 71 + 50 + 80

Combinations for cooling operation only.

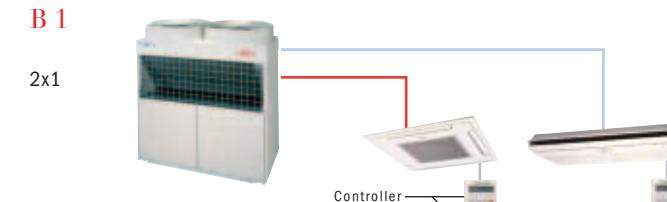

N.B.: Cooling gas return circuit the same as the send circuit.

## Heat pump

- Outdoor unit with two compressors that allow heating or cooling to each circuit
- Two circuits: Two controllers
- Range of cooling operation: 0 to 52 °C
- Range of pump operation: -10 to 21 °C
- Up to 50 m cooling distance

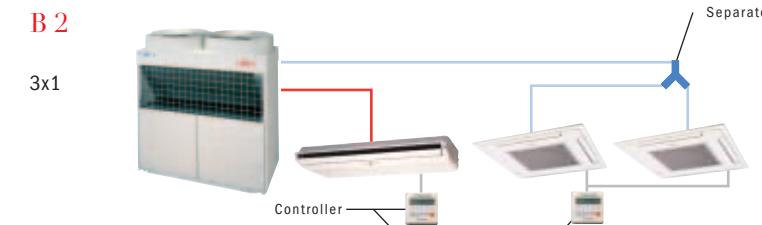

B 1

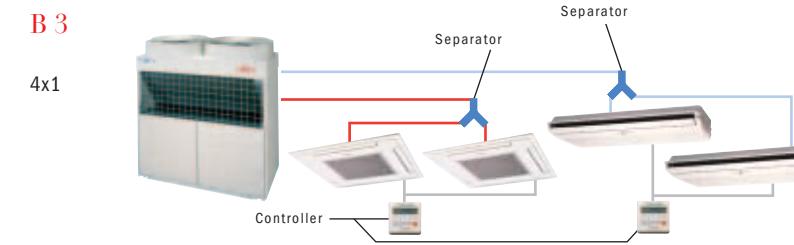

Capacity of indoor units:  
125 / 125

B 2

Capacity of indoor units:  
125 / 71 + 71  
125 / 50 + 80

B 3

Capacity of indoor units:  
71 + 71 / 71 + 71  
50 + 50 / 50 + 100  
50 + 80 / 50 + 80

Combinaciones para funcionamiento bomba de calor..

N.B.: Cooling gas return circuit the same as the send circuit.

# Controller

## Multisplit Big Multi / Duct type controller

**1 Timer button**

Timer mode change.

**2 SET TIME button**

Programmes the timer and the time.

**3 Temperature/day button**

Selects the temperature/day.

**4 Airflow direction / swing**

Vertical and fan.

**5 MASTER CONTROL button**

Used to select HEAT/FAN/COOL/AUTO.

**6 Fan speed button**

**7 START/STOP button**

**8 Horizontal and fan airflow direction**

**10 DAY OFF button**

One day TIMER cancellation.

**11 Programming button**

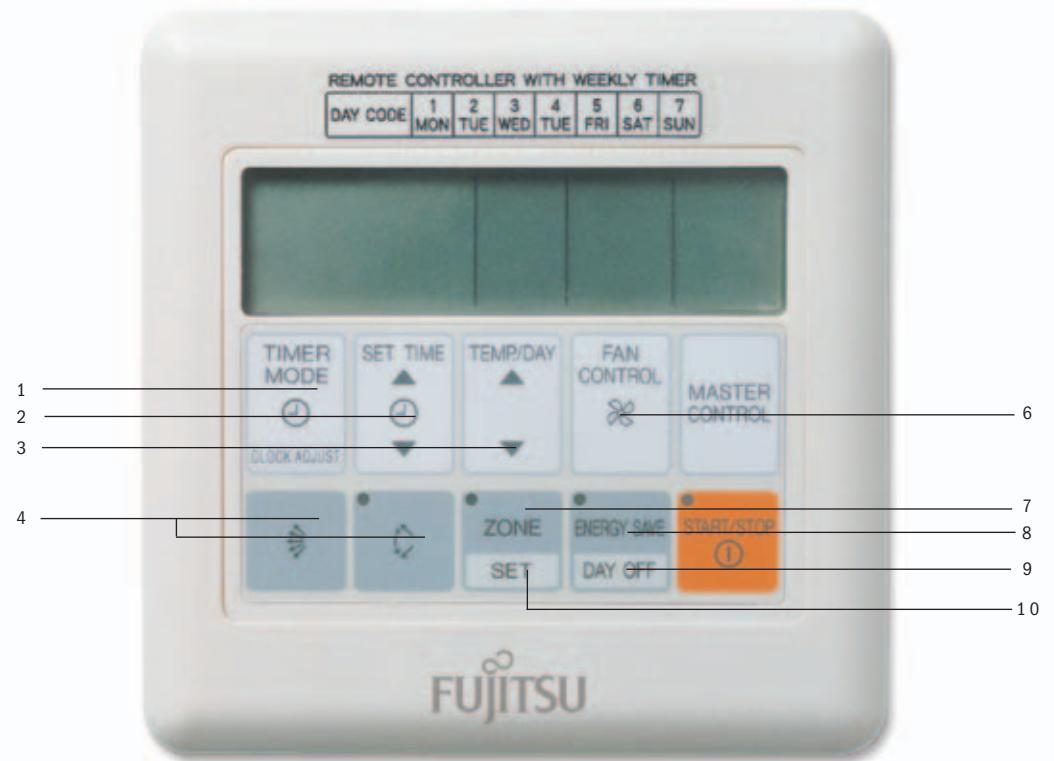

Date, time, minutes, connection/disconnection of the TIMER.

**FUNCTIONS**

- Has 3 TIMER modes:  
ON/OFF/WEEKLY.

- Weekly TIMER functions:

- Possibility of setting different on/off times according to the day of the week.
- possibility of start/stop programming twice a day.
- possibility of programming in periods of five minutes.
- The TIMER program for one day can be cancelled by pressing "DAY/OFF".

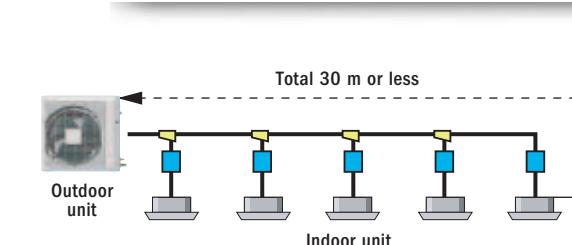

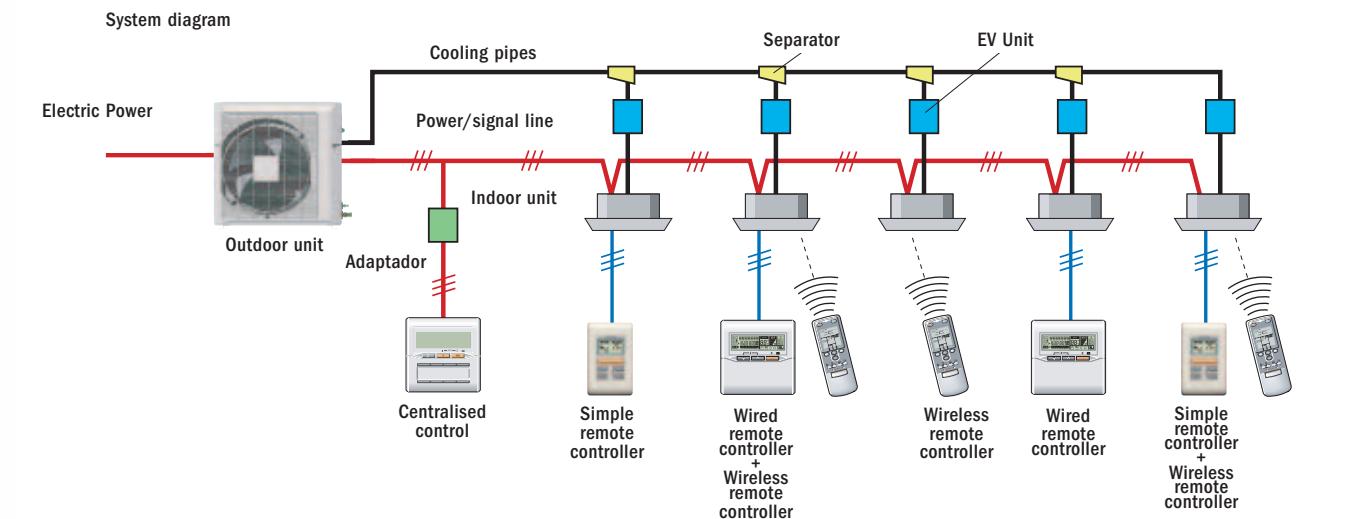

## μ VRF - J-Serie. All the facilities

128

### Easy and simple installation

Designed specifically to facilitate installation, this system makes it possible to connect the indoor units to a single cooling line using just one cable for the power supply and data transfer.

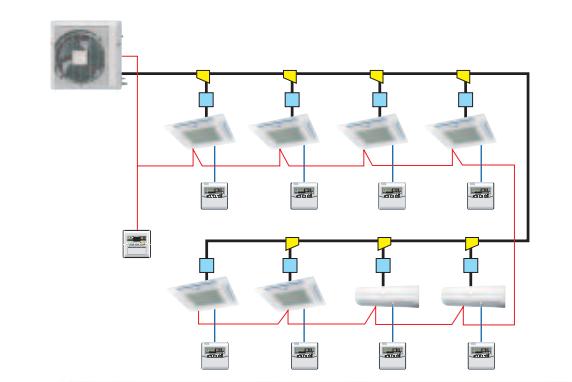

### Preloaded system

No additional coolant load is required if the total length of the cooling lines does not exceed 30 m.

Cooling COP	3.2
Heating COP	3.4

### Efficiency + effectiveness

The latest generation Scroll Inverter compressor ensures high power with minimal consumption, achieving ongoing optimum performance.

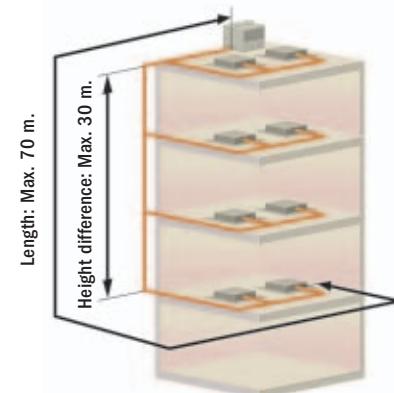

### Up to 8 indoor units can be connected

The μ VRF units make it possible to connect a single system to a maximum of 8 indoor units whose sum of capacities does not exceed 150% of the power of the outdoor unit.

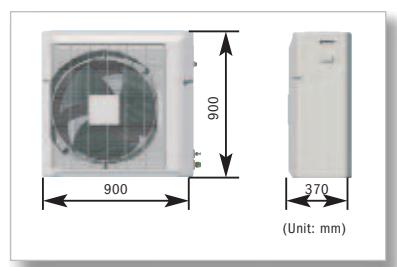

### High cooling distances

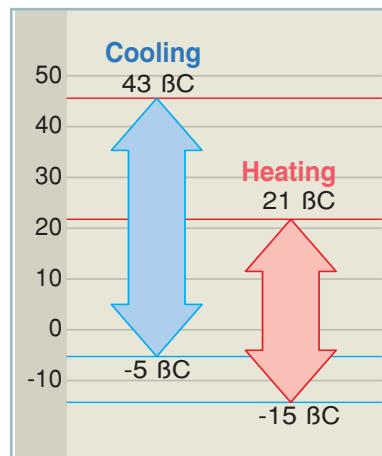

The cooling distance between the outdoor unit and the indoor unit furthest away can reach 70 m, with a height difference of 30 m. Likewise, the total length of cooling pipes allowed by the system is 115 m.

# AOY140U

Small size.

Wide operating range.

**Extraordinarily compact size:**

Reduced weight and size that allows discreet positioning.

**Wide operating range:**

From -15° in heating mode to +43° in cooling mode.

**High power and low consumption:**

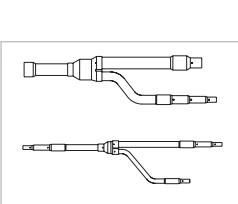

The high-performance inverter scroll compressor adapts to the needs of the installation.

# ARY20-125

Maximum discretion for floor or ceiling installation.

Installation.

## Easy installation:

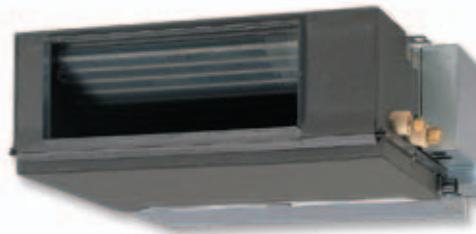

its compact low-profile design allows for a wide range of installation possibilities.

## Quiet operation:

the noise level has been reduced to extremely low levels for the purpose of minimising its impact.

# ASY20-71

High-efficiency.

Multi air flow.

## New compact model:

The dimensions of these units (up to the model 40) have been reduced by 42% with regard to the previous design. They also incorporate a new removable panel that can be easily cleaned.

## Aesthetic design:

The vertical and horizontal symmetry provides an elegant design that combines with any interior decor.

# AUY20-140

Easy maintenance.

Fan 4 positions.

Selection of 2 to 4 channels.

## Accessibility:

It has a large opening that facilitates access to the filter, electrical components and the fan, simplifying maintenance tasks.

## Greater comfort:

The automatic positioning of the output angle, the selection of the number of channels and the possibility of distributing the air through auxiliary conduits allow it to be adapted to any environment.

## Adjustable height:

From the model 50 onwards, there is the possibility of reducing the height for installation in false ceilings with little free space.

## Top features and comfort

The variable refrigerant flow system uses the latest technology to achieve the highest level of features and comfort at the lowest energy cost. The reliability, flexibility, ease of installation and the high number of possible configurations are to some of the numerous advantages that the VRF System offers you.

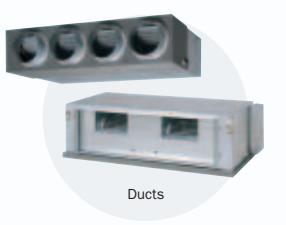

FUJITSU

Outdoor unit

Compact products

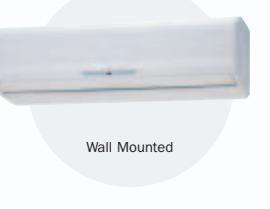

Ducts

Floor-ceiling

Large Ceiling

Wall Mounted

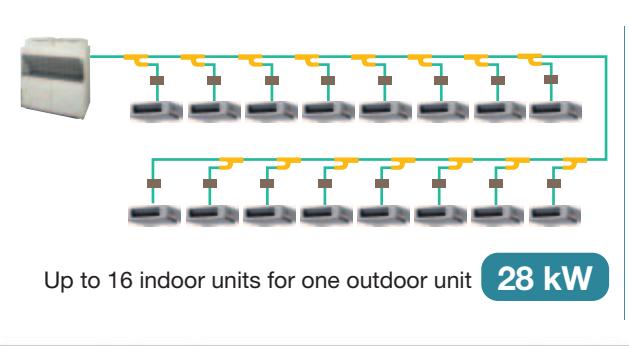

Wall Ceiling

# VRF S-Series

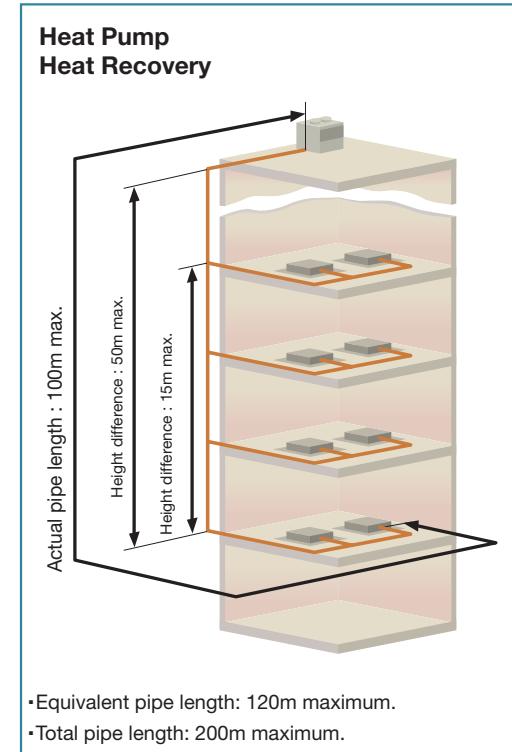

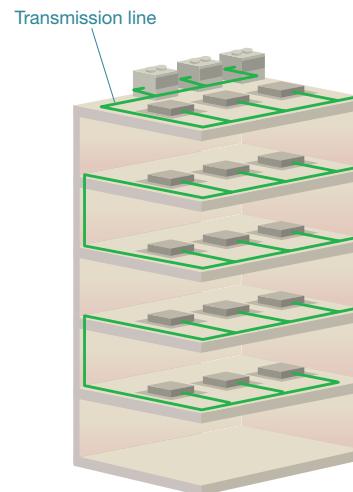

## Design Flexibility

The VRF system allows installation of up to 16 indoor units for each outdoor unit (up to 13 units on the 8 HP), with a connected power of up to 130% of the outdoor unit's capacity.

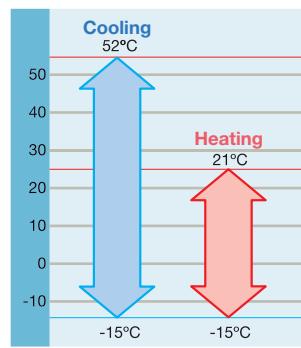

## Easy to install

All the outdoor and indoor units connect to a single, non-polar twin-strand transmission line, avoiding errors and simplifying installation.

## Extended cooling distances

The distance between the furthest indoor unit and the outdoor unit can reach 100 m and with a height difference of 50 m. The system allows the total length of refrigerant pipes of 200 m.

## Wide performance range

The outdoor unit can operate within a range of outside temperatures from -15°C to 52°C in cooling mode, and from 15°C to 21°C in heating mode.

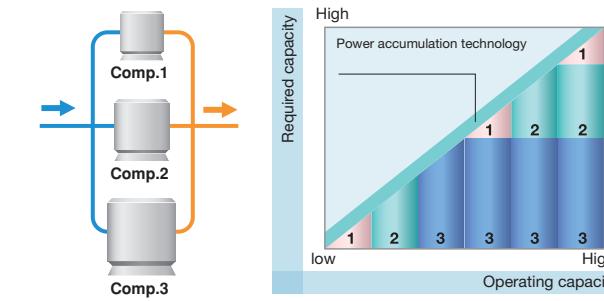

\*Heat pump series

## High COP

The new refrigerant dual flow control system using dual control technology and the optimum balance of the multi compressor system provide the highest efficiency, reaching COP levels greater than outdoor units of an equivalent class.

<b>High COP</b>	
Cooling COP	<b>3.1</b>
Heating COP	<b>3.7</b>

**20% higher compared to outdoor units of equivalent class**  
\*AO90TPBMF

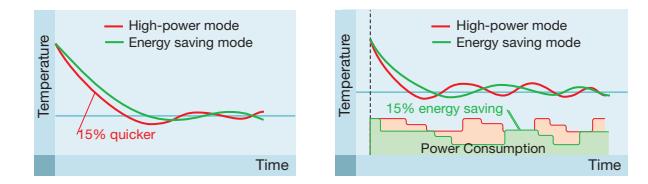

## Multi compressor system

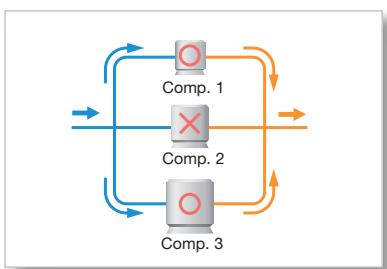

The compressor capacity is obtained via the optimum balance of three compressors that are individually adjusted. This technology is extremely efficient and allows the coolant flow to be precisely adjusted.

## Selectable Operation Mode

The high power or energy-saving operation can be selected at will and these have the effect of changing the air diffusion temperature by 2°C. The energy save mode allows consumption to be reduced by 15% and the high power mode increases the capacity by an equal amount.

# AOY90 TPAMBF

### High reliability:

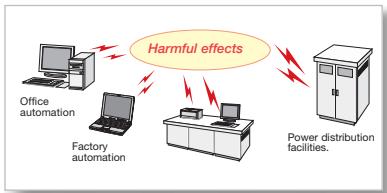

In the event of compressor failure, the remaining compressors can continue operating.

### Free of electronic disturbances:

Given that the VRF system does not use Inverter technology, there is no interference with electronic units.

### Easy to install:

Its compact size and the possibility of making cooling connections in any direction simplify installation.

# ARY20-50

Ceiling positioning.

Floor positioning.

## Easy to install:

Its compact low-profile design and the possibility of horizontal or vertical configuration allow for a wide range of installation possibilities.

## Quiet operation:

For the purpose of minimising its impact in small rooms, the sound level has been reduced to 26 dB(A).

Installation methods.

## Versatile distribution:

With an available pressure of up to 300 Pa for the AR60H and AR90H models, it is possible to carry out wide distribution of ducts to condition several areas.

## Simple connections:

The condensate pipes can be connected in different directions to facilitate installation.

# ASY20-80

Automatic twin fan and greater range.

## New compact model:

The dimensions of these models (AS 7 - AS 14) have been reduced by 42% compared to the previous design. They also incorporate a new removable panel that can be easily cleaned.

## Aesthetic design:

The vertical and horizontal symmetry provides an elegant design that combines with any interior decor.

# AWY40 - AWY80

## Low noise level:

The new design of the deflector that removes turbulence and the wide upper air return reduce the noise level.

## Easy access:

The drainage tray can be easily removed and the long-life filter is removed simply by pressing it.

AWY40-50-71-80

Low noise level.

# Remote controllers

## Wired remote controller

### UTB - YUB

Possibility of controlling up to 16 indoor units.  
 Energy save and antifreeze function.  
 Weekly programmer built in.  
 Check and self diagnostics  
 Compatible with all indoor units except compact wall units.  
 Temperature sensor built in.

Wired remote controller  
UTB - YUB

Wireless remote controller  
UTB - YVA

## Wireless remote controller

### UTB - YVA

Daily programmer built in.  
 Elevated reach and precision.  
 Energy save and sleep function.  
 Code selector to avoid confusion between indoor units.  
 Compatible with all indoor units except ducts.

Simple remote controller  
UTB - YPA

## Simple remote controller

### UTB - YPA

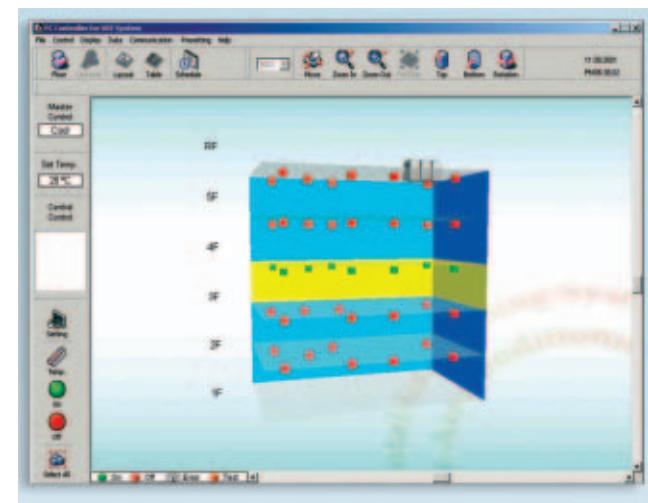

Simple use.  
 Slim, compact design.  
 Luminous background for use in the dark.  
 Especially recommended for hotels and offices.

Code	3NGF9050	3DGF9411	3DGF9450
Price ref.	95	42	76

## Central remote controller UTB - YCA

Possibility of controlling up to 400 indoor units.  
 Weekly programmer built in.  
 Allows the individual control functions to be blocked.  
 Easy use.  
 Check and self diagnostics.

**UTR - YOTA**  
PC controller

## PC controller UTR - YOTA

Possibility of controlling up to 400 indoor units.  
 Annual programmer built in.  
 Allows the individual control functions to be blocked.  
 Calculation of electrical consumption of user groups.  
 Operation and fault register.  
 Check and self diagnostics.

**UTB - YCA**  
Central  
remote controller

## Transmission adaptor UTR-YTMB

Allows the VRF system to be managed from external centralised control (BMS).  
 Transfer adaptor for RS-232C communication.

**Transmission  
adaptor**  
**UTR - YTMB**

## Network convertor UTR-YLLA

Allows the VRF system to be managed from external centralised control (BMS).  
 Transmission converter for communication with LONWORKS® networks.

### Models

## Network convertor UTR-YLBA

Allows the VRF system to be managed from external centralised controls (BMS), in accordance with the ANSI/ASHRAE 135-2001 standard.  
 Transmission converter for communication with BACnet® networks.

# Accessories

## Refrigerant Branch unit-4way

For heat recovery. Required for the connection of the indoor units to the pipes . Available for up to four indoor units.

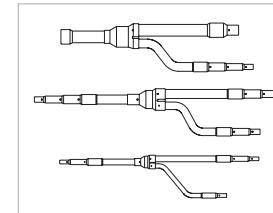

## Refrigerant Branch unit-1way

For heat recovery. Required for the connection of the indoor units to the pipes. It has a connection for an indoor unit.

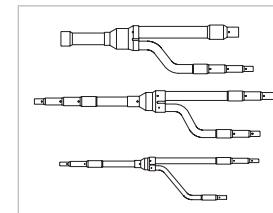

## 90R 3 pipe separator

For heat recovery, when the sum of indoor unit codes exceeds the value of 60.

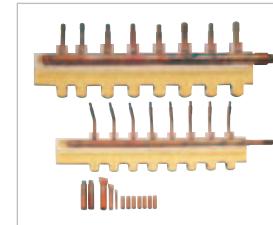

## 54R 3 pipe separator

For heat recovery, when the sum of indoor unit codes is the same as or exceeds the value of 60.

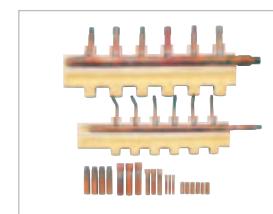

## Header 8 outlets, 3 x 908R pipes

It is possible to connect up to 8 indoor units for heat recovery series.

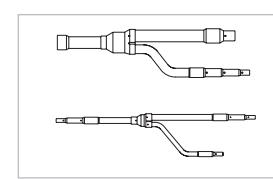

## Header 6 outlets, 3 x 906R pipes

It is possible to connect up to 6 indoor units for heat recovery series.

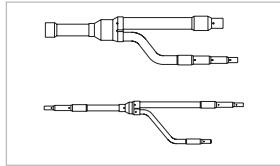

## Separator 2 x 90A pipes

For the heat pump series, when the sum of indoor unit codes exceeds the value of 60.

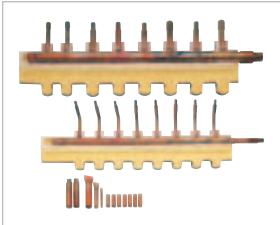

## Separator 2 x 54A pipes

For the heat pump series, when the sum of indoor unit codes is the same as or exceeds the value of 60.

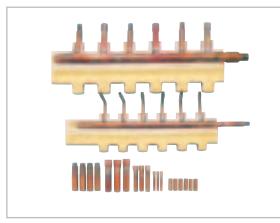

## Header 8 outlets, 2 x 908A pipes

For the heat pump series it is possible to connect up to 8 indoor units.

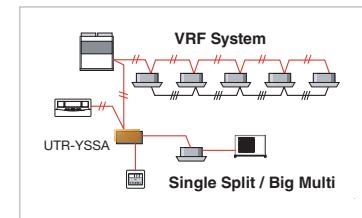

## Header 6 outlets, 2 x 906A pipes

For the heat pump series it is possible to connect up to 6 indoor units.

## Network convertor UTR-YSSA

Allows split or large room units to be integrated to the VRF control system.

## Signal amplifier UTR-YRPA

Required when the transmission line exceeds 500 m or the number of units connected is greater than 64.

## Service tool UTR-YSTB

Software that allows the operation of the VRF system to be verified and analysed and any anomaly to be detected.

## A stylish range

The Eurofred industrial range always provides the right solution, in accordance with the required needs and conditions. This is possible through the variety of models and power performance that the range has, coupled with easy installation, ensuring proper air conditioning without worrying about the size of the space to be conditioned.

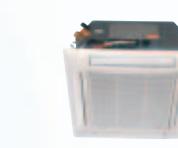

Heat recovery

Aircooled liquid chillers and heat pump

Watercooled chillers and heat pump

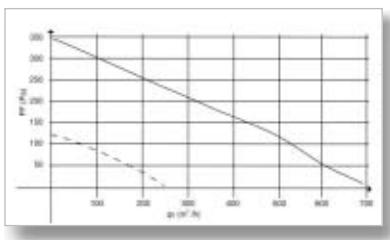

Fan Coils

Modular ductable

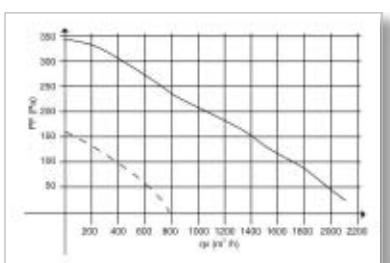

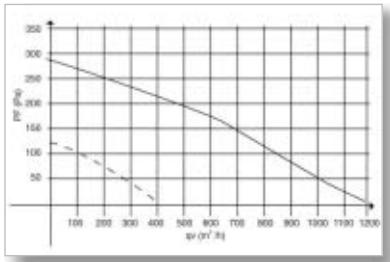

## HR750-2200

These units carry out pre-processing of outside air through the cold/hot transfer provided by the extraction air.

They are fitted with an easy to clean, sensitive heat exchanger, with high-performance and a long life.

The velocity adjuster allows the capacity of the recuperators to be varied from 30% to 100%.

HR750/1200/2200

Weight (including anchoring)	kg	53	101	132

- This equipment provides the outside air necessary to comply with the regulations governing heating facilities in buildings (RITE).
- They allow the thermal load of the installation to be reduced, enabling apparatus with less power to be used.
- High reduction in energy consumption.

# CRAE18-71

## Structure:

Self holding type, made from peraluman and galvanised steel. Stainless steel nuts and bolts. The panels can be dismantled providing easy access inside the unit for maintenance and repairs. It incorporates anti-vibratory brackets.

## Compressors:

Of the hermetic rotating or hermetic scroll type with klixon internal protection and sump resistor.

## Ventilators:

Low revolution axial kind with a special blade profile, coupled directly to the external rotor motor with IP 54. It has a protection grille coupled to the impulsion.

## Condenser:

Made from a battery of copper tubing with aluminium blades, complete with a condensate tray.

## Evaporator:

Made from AIS1316 stainless steel panels, located inside the tank.

## Cooling circuit:

The circuit, made from copper pipe, includes: Bidirectional dehydration filter, expansion valves, pressostat with manual reset, valve with four channels and condensation control,

## Hydraulic circuit:

The circuit, made from copper pipe, includes: Water differential pressostat, manual air bleed valve, insulated tank, circulator (18-31) or pump (41-71),

safety valve (3 bar), pressure gauge, filling and emptying spigots and an expansion container located inside the tank.

## Electrical panel:

The electrical components included in the units are the following:

- General override switch
- Fuses
- Compressor contact
- Pump contact (models 41-71)

## Microprocessor:

For the automatic administration of the following functions:

- Adjustment of the water temperature
- Anti-ice protection
- Timing of the compressors
- Alarm reset
- Free power contacts for alarm signalling and change of cycle for thermal pumps.
- Visualisation of the operation cycle, status of the compressor, temperature of the return water, operational temperature, differential established and alarm codes.

## Proportional electronic device:

Permits reduction of the noise level of the unit through ongoing adjustment of the fan speed.

## Hydraulic circuit:

The circuit, made from copper pipe, includes: Water differential pressostat and manual air bleed valve.

## Electrical panel:

The electrical components included in the units are the following:

- General override switch
- Fuses
- Compressor contact
- Pump contact (models 41-151)

## Microprocessor:

For the automatic administration of the following functions:

- Adjustment of the water temperature
- Anti-ice protection
- Timing of the compressors
- Alarm reset
- Free potential contacts for alarm signalling and change of cycle for thermal pump units.
- Visualisation of the operation cycle, status of the compressor, temperature of the return water, operational temperature, differential established and alarm codes.

CSAE25-151

## Optional accessories

- Condensation control
- Circulation pump
- Low pressure pressostat (models 25-71)
- Remote control panel
- Serial port connection
- Anti-vibratory devices
- Battery protection grille

# CSAE182-604

## Structure:

Of the self holding type, made from galvanised steel with protection via polyester paint. The panels can be dismantled providing easy access inside the unit for maintenance and repairs.

## Compressors:

Of the hermetic scroll type with oil viewer. They incorporate thermal protection and anti-vibratory devices.

## Ventilators:

Of the axial type, coupled directly to the three phase motor of the outside rotor. It has a protection grille coupled to the impulsion.

## Condenser:

Made of a battery of copper tubing with aluminium blades. The interior movement of the coolant has been designed to obtain two separate circuits.

## Evaporator:

Made from AISI 316 stainless steel panels insulated on the outside with flexible material on sealed cells, with two independent coolant circuits and one of water. The thermal pump version has a standard anti-ice resistor.

## Cooling circuit:

Each unit has two independent cooling circuits.

The circuit, made from copper pipe, includes: Dehydration filter, thermostatic expansion valve with external balancing, liquid and humidity indicator. The following devices are incorporated to protect the circuit: High-pressure and low pressure pressostats.

## Hydraulic circuit:

The circuit includes: Temperature sensor, anti-ice sensor, water differential pressostat and manual air bleed valve.

## Electrical panel:

The electrical components included in the units are the following:

- General override switch
- Fuses, thermal relays for protection of the compressor and thermal contact for the fans.
- Interconnection relay
- Terminals for external connections
- Microprocessor for the automatic operation of the unit: This allows the status of the unit, the operational water temperature, its real temperature and the safety device that might have been activated as a protection measure to be viewed at any time.

## CHAE201-702

**Structure:**

Of the self holding type, made from galvanised steel with protection via polyester paint. The panels can be dismantled providing easy access inside the unit for maintenance and repairs.

**Compressors:**

Of the alternative semi-hermetic type, they incorporate sump resistor, oil level viewer and thermal protection

**Ventilators:**

Of the axial type, coupled directly to the three phase motor with an outside rotor. It has a protection grille coupled to the impulsion.

**Condenser:**

Made of a battery of copper tubing with aluminium blades. The interior movement of the coolant has been designed to obtain one or two separate circuits.

**Evaporator:**

Of the multitubular type, with one or two independent cooling circuits.

**Cooling circuit:**

Each unit has one or two independent cooling circuits. The circuit, made from copper pipe, includes: Dehydration filter, thermostatic valve with external balancing and service outlets. The following devices are incorporated to protect the circuit: High-pressure pressostat, low pressure pressostat and anti-ice thermostat.

**Electrical panel:**

The electrical components included in the units are the following:

- General override switch
- Fuses, thermal relays for protection of the compressor and thermal contacts for the fans.
- Interconnection relay
- Terminals for external connections
- Microprocessor for the automatic operation of the unit: This allows the status of the unit, the operational water temperature, its real temperature and the safety device that might have been activated as a protection measure to be viewed at any time.

## Optional accessories

- Oil, high pressure and low pressure gauges
- Vibration dampening supports
- Anti-ice resistor
- Condensation control up to -20°C
- Battery protection grille
- Flow switch (not assembled)
- Second pump (SP version)
- Remote control panel
- Serial port connection
- Silencer
- Smooth start-up

## Versions:

CCHAE	Cooling only (standard)
CHAE/WP	Heat pump
CHAE/HR	Heat recovery through heat booster
CHAE/HRT	Total heat recovery
CHAE/SSL	Super-silent configurations
CHAE/SP	Hydraulic kit (pump, tank and expansion vessel)

# CHAE802-3204

**Structure:**

Of the self holding type, made from galvanised steel with protection via polyester paint. The panels can be dismantled providing easy access inside the unit for maintenance and repairs.

**Compressors:**

Of the alternative semi-hermetic type, they incorporate sump resistor, oil level viewer and thermal protection. Installed on elastic supports on the sealed compartment to protect them from weather conditions and reduce the noise level.

**Fans:**

Of the axial type, coupled directly to the three phase motor with an outside rotor. It has a protection grille coupled to the impulsion.

**Condenser:**

Made of two batteries of copper tubing with aluminium blades.

**Evaporator:**

Of the multibutular type, with two independent cooling circuits.

**Cooling circuit:**

Each unit incorporates independent cooling circuits. The circuit, made

from copper pipe, includes: Electro valve on the liquid line, dehydration filter and thermostatic expansion valve with external compensator. The following devices are incorporated to protect the circuit: High-pressure pressostat, low pressure pressostat, oil differential pressostat, anti-ice thermostat and safety valve.

**Electrical panel:**

The electrical components included in the units are the following:

- General override switch
- Fuses, thermal relays for protection of the compressor and thermal contacts for the fans.
- Interconnection relay
- Terminals for external connections
- Microprocessor for the automatic operation of the unit: It enables: The status of the unit, the operational water temperature, its real temperature, and the safety device that may have been activated as a means of protection to be viewed at any time.

# CSCE25-131

## Structure:

Of the self holding type, made from galvanised steel with protection via polyester paint. The panels can be dismantled providing easy access inside the unit for maintenance and repairs.

## Compressors:

Of the hermetic scroll type with klixon internal protection and sump resistor.

## Fans:

Of the twin centrifugal type, statically and dynamically balanced, coupled directly to the single phase electric motor (model 31), three phase (model 41 to 71) or through a three-phase motor with belt transmission (from model 81 to 131).

## Condenser:

Made of a battery of copper tubing with aluminium blades.

## Evaporator:

Made from AISI 316 stainless steel panels, insulated on the outside with flexible material on sealed cells.

## Cooling circuit:

The circuit, made from copper pipe, includes: Dehydration filter, load valve, liquid viewer, expansion valve, high-pressure pressostat with manual reset, low pressure pressostat with automatic reset (models

81-151) and liquid and humidity viewer (models 81-151)

## Hydraulic circuit:

The circuit, made from copper pipe, includes: Water differential pressostat and manual air bleed valve.

## Electrical panel:

The electrical components included in the units are the following:

- Automatic magneto thermal switch with override
- Compressor contact
- Pressure transducer
- Automatic fan speed regulator (for operation in cooling mode)

## Microprocessor:

For the automatic administration of the following functions:

- Adjustment of the water temperature
- Anti-ice protection
- Timing of the compressors
- Alarm reset
- Free potential contacts for alarm signalling and change of cycle for thermal pump units.
- Visualisation of the operation cycle, status of the compressor, temperature of the return water, operational temperature, differential established and alarm codes.

# CSCE182-604

## Structure:

Of the self holding type, made from galvanised steel with protection via polyester paint. The panels can be dismantled providing easy access inside the unit for maintenance and repairs.

## Compressors:

Of the hermetic scroll type with oil viewer. They incorporate thermal protection and anti-vibratory devices.

## Fans:

Of the centrifugal type. Coupled to the three-phase motor through belts and pulleys.

## Condenser:

Made of a battery of copper tubing with aluminium blades. The interior movement of the coolant has been designed to obtain two separate circuits.

## Evaporator:

Made from AISI 316 stainless steel panels, with two independent circuits on the coolant side and one for water. The thermal pump version has a standard anti-ice resistor.

## Cooling circuit:

Each unit incorporates two independent cooling circuits. The circuit, made from copper pipe, includes: Dehydration filter, thermostatic expansion valve with external balancing and service outlets.

The following devices are incorporated to protect the circuit: High-pressure pressostat, low pressure pressostat and anti-ice thermostat.

## Hydraulic circuit:

The circuit includes: Temperature sensor, anti-ice sensor, water differential pressostat and manual air bleed valve.

## Electrical panel:

The electrical components included in the units are the following:

- General override switch
- Fuses, thermal relays for protection of the compressor and thermal contacts for the fans.
- Interconnection relay
- Terminals for external connections
- Microprocessor for the automatic operation of the unit: This allows the status of the unit, the operational water temperature, its real temperature and the safety device that might have been activated as a protection measure to be viewed at any time.

# WSE31-151

## Structure:

Of the self holding type, made from galvanised steel with protection via polyester paint. The panels can be dismantled providing easy access inside the unit for maintenance and repairs.

## Compressors:

Of the three-phase hermetic scroll type with klixon internal protection and sump resistor.

## Condenser:

Made from AISI 316 stainless steel panels with pressure valve for use with well water or the urban water network.

## Evaporator:

Made from AISI 316 stainless steel panels, insulated on the outside with flexible material on sealed cells.

## Cooling circuit:

The circuit, made from copper pipe, includes: Dehydration filter, load valve, thermostatic expansion valve and cut-off valves on the compressor impulsion and intake.

## Electrical panel:

The electrical components included in the units are the following:

- Automatic magneto thermal switch with override
- Compressor contact
- Pressure transducer
- Automatic fan speed regulator (for operation in cooling mode)

## Microprocessor:

For the automatic administration of the following functions:

- Adjustment of the water temperature
- Anti-ice protection
- Timing of the compressors
- Alarm reset
- Free potential contacts for alarm signalling and change of cycle for thermal pump units.
- Visualisation of the operation cycle, status of the compressor, temperature of the return water, operational temperature, differential established and alarm codes.

# WHE201-2804

## Structure:

Of the self holding type, made from galvanised steel with protection via polyester paint. The panels can be dismantled providing easy access inside the unit for maintenance and repairs.

## Compressors:

Of the alternative semi-hermetic type, they incorporate sump resistor, oil level viewer and thermal protection

## Condenser:

Of the multiblade type with access to facilitate maintenance. It is fitted with a condensator for each cooling circuit. Hydraulic connections for operation with tower water or network water.

## Evaporator:

Of the multiblade type, with one or two independent cooling circuits.

## Cooling circuit:

Each unit has one or two independent cooling circuits. The circuit, made from copper pipe, includes: Dehydration filter, thermostatic valve with external balancing and service outlets. The following devices are incorporated to protect the circuit: High-pressure pressostat, low pressure pressostat and anti-ice thermostat.

## Electrical panel:

The electrical components included in the units are the following:

- General override switch
- Fuses, thermal relays for protection of the compressor and thermal contacts for the fans.
- Interconnection relay
- Terminals for external connections
- Microprocessor for the automatic operation of the unit: This allows the status of the unit, the operational water temperature, its real temperature and the safety device that might have been activated as a protection measure to be viewed at any time.

# FV13-73

## Structure:

Made from steel plate and ABS details.

## Battery:

Made from copper tube with aluminium blades, with a female connection fitted with a bleed valve. It incorporates a drainage tray and hydrolytic treatment.

## Fan:

Silent centrifugal set with a twin body and sealed motor, mounted on anti-vibratory elastic supports.

## Filter:

Can be dry cleaned, made of acrylic material and assembled on guides.

## Control (optional):

Remote or built into the structure (depending on the model), allowing the operation mode, three fan speeds and the operational temperature to be selected.

## Models

VPE:	Fan convector with vertical impulsion and lower intake. Incorporates ABS slats that can be positioned in 4 directions and support legs.
VOE:	Fan convector with horizontal impulsion and grille intake. Incorporates ABS slats that can be positioned in 4 directions.
IVE:	Fan convector for vertical installation.
IOE:	Fan convector for horizontal installation, with an input for impulsion.

# FME04-FME18

## Casing:

Made from fire resistant plastic material with an attractive design that adapts perfectly to the needs of hotels, offices or homes.

## Battery:

Made from copper tubing with aluminium blades, and fitted with air and water bleed valves.

## Fans:

Tangential, statically and dynamically balanced to reduce noise and vibrations.

## Filter:

Synthetic and washable, it can be accessed easily by lifting up the front panel.

## Slats:

Fitted with two motorised slat and positionable deflectors to provide better air distribution.

## Microprocessor control:

It allows the following functions:

- Control of the 3 channel valve.
- Fan, heating and cooling modes.
- Master-slave operation.
- 24-hour timer.
- Indication of unit operation.
- RS485 serial port.

**It incorporates wireless control and 3 channel valve.**

# FCE03-FCE16

**Structure:**

Machine body thermally insulated to avoid the formation of condensate. Allows the contribution of outside air.

**Panel:**

Designed to be adapted to modular ceilings 600x600 or 1200x600. Incorporates a washable synthetic filter that is easy to remove.

**Battery:**

Made from copper tubing with aluminium blades, and fitted with bleed valves, tray and condensate pump.

**Fans:**

They have one or two units, dynamically and aesthetically balanced that work in silent mode.

**Slats:**

Motorised and positionable to achieve excellent air distribution.

**Microprocessor control:**

It allows the following functions:

- Control of the 3 channel valve.
- Fan, heating and cooling modes.
- Master-slave operation.
- 24-hour timer.
- Indication of unit operation.
- RS485 serial port.

**Incorporates wireless control.**

# UTWE63-544

## Structure:

Made from galvanised plate (63-274) and pre-painted plate (333-544), completely covered with thermo acoustic insulation.

## Fans:

Of the double intake centrifugal type, aesthetically and dynamically balanced to minimise noise and vibrations, coupled directly to the three speed single-phase motor (63-273) or with three-phase belt drive of a single speed (333-544).

## Battery:

Made from copper tube with aluminium blades, with a drainage tray.

## Air filter:

Made from recyclable synthetic material of EU3 class. Checks are made through the lower part (63-274) or the side (333-544).

## Electrical panel:

Include connection plates for control connection and the electrical power.

## Control (optional):

Allows temperature control in summer and winter, as well as fan speed selection.

UTWE 63 - 544

Please check reference prices and the rest of the accessory range in "Clima accessory catalogue 2006".

## Purifying filters.

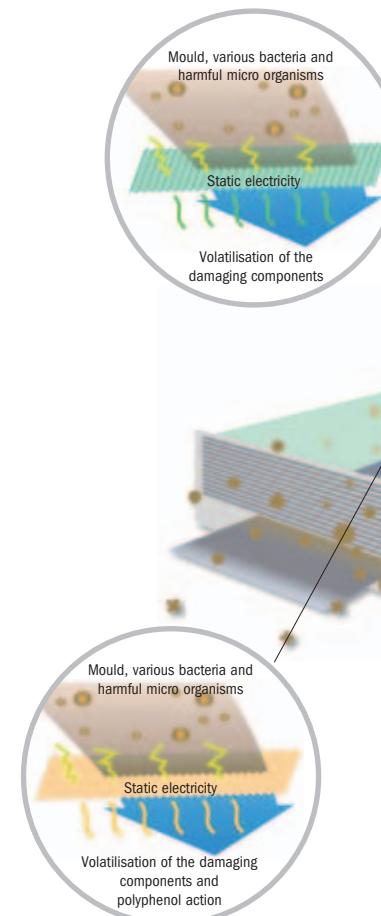

A fresh environment free from impurities

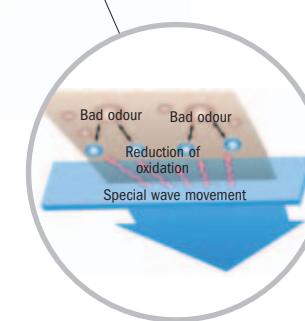

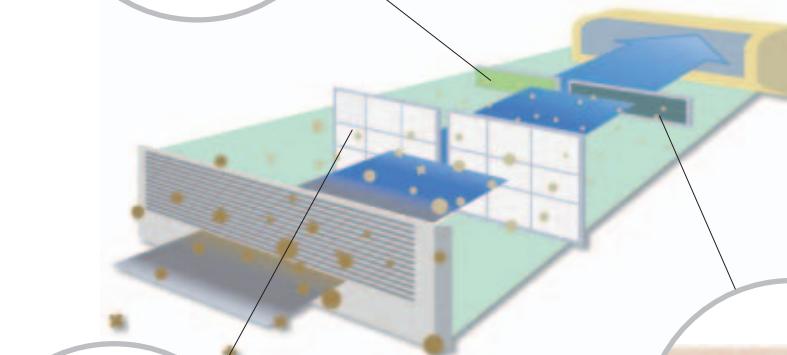

## Wasabi antibacterial filter

This absorbs mould, bacteria and other harmful micro organisms.

Wasabi is a Japanese vegetable with a powerful antibacterial and anti-carcinogenic effect.

Volatilisation of the damaging components and polyphenol action

## Antibacterial filter

The static electricity generated by the antibacterial filter neutralises spores, small particles and micro organisms.

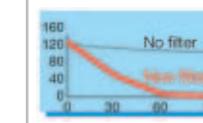

Found in vegetables, fruits and tea, polyphenol is a natural element that has strong antioxidant, antibacterial and deodorising powers.

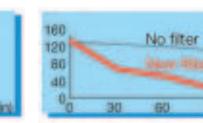

## Ion deodoriser filter

To remove bad smells the deodorising filter generates ions that reduce oxidation.

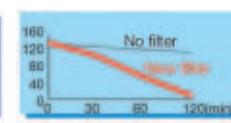

### Deodorising effect (removal of bad smells)

Ammonia

Trimethylamine

Hydrogen sulphide

## Models

### For models ASY20/25/35U/F - ASY20/25/35Ui2/Ti4 - Interior multisplits

Model	Antibacterial filter	Deodorising filter
Code	4JAG0018	4JAG0019

### For models ASY71/80U/F - ASY50Ui2/Ti4 - ASY71Ti4

Model	Wasabi filter + Deodoriser
Code	4JAG0023

# Functions of our air conditioners

## 1. Moisture Removal

The computer effectively dehumidifies the air.

## 2. Up/Down Swing Flaps

The up/down flaps automatically swing to up and down.

## 3. Double Swing Automatic

Complex swing action of flaps enables automatically to swing both horizontal and vertical directions.

## 4. Automatic Flaps

The position of the flaps is set automatically to match the operating mode. It is also possible to adjust the flaps using the remote control.

## 5. Auto Shut Flaps

The auto shut flaps close or open automatically when the unit stops or starts.

## 6. Automatic Air Flow Adjustment

The micro-computer automatically adjusts, the air flow effectively to follow the changes of room temperature.

## 7. Auto Restart

In the event of a temporary power failure, the air conditioner will automatically restart in the same operating mode as before, once the power supply is restored.

## 8. Auto-Changover

The unit automatically switches between heating and cooling modes based on your temperature setting and the room temperature.

## 9. Sleep Timer

The micro-computer gradually changes the room temperature automatically to afford a comfortable night's sleep.

## 10. Program Timer

This digital timer allows selection of one of four options. ON, OFF, ON → OFF, or OFF → ON.

## 11. Weekly timer

Different on-off times can be set for each day.

## 12. Connectable Distributing Duct

Conditioned air can be distributed by means of a distribution duct.

## 13. Connectable Fresh Air Duct

Duct connection port hole opening: Fresh air can be introduced through this opening.

## 14. Long-life Ion deodorization filter

By reducing the oxidation via the generation of ions, this filter efficiently neutralises bad smells.

## 15. Anti-bacteria filter

By using static electricity, this filter removes small spores, particles and micro organisms.

## 16. Class A

Top ratings in energy efficiency.

## 17. Energy Save

Considerable energy savings are achieved thanks to the temperature adjustment control of the thermostat.

## 18. Test Function

Checks the operation of the unit and emits an error signal when the unit requires checking.

## 19. Pump Down

This function allows the coolant to be collected by activating a switch on the electronics board.

## 20. Control Zone

This allows up to 16 different units to be controlled with a single remote controller.

## 21. Hot start

The indoor unit fan will not operate until the heat exchanger reaches the set temperature.

air conditioning
